27. Submit a School Calendar & Schedule

Note: While charter schools are exempted from HRS §302A-251, regarding instructional time, charter schools are subject to collective bargaining pursuant to HRS Chapter 89, Collective Bargaining in Public Employment. Applicants must ensure that their proposed plan will comply with collective bargaining requirements. Applicants proposing school calendars and schedules outside the parameters of HRS §302A-251 must negotiate agreements that supplement any Master Collective Bargaining Agreements and should be cognizant of possible limitations of these agreements.

A proposed school calendar and schedule are attached.

**The proposed academic calendar will follow that of the Hawaii Department of Education's official school calendar and will be adjusted as necessary to maintain the 180 – day instructional days and yearly hours for students.*

***To meet the professional development needs of teachers, especially in our first year of operation, LNCA will seek an amendment to the CBA with HSTA to accept 8 additional days of teacher compensated professional development. The calendar will be adjusted accordingly pending the outcome of such an amendment.*

Lima No'eau Career Academy K-5 Student Schedules

Key Program Components & Assurances

- Does your plan include training and communication procedures for staff and students? Yes
- How will you specifically monitor the proper execution of student schedules at your school? Teachers will be given the required instructional schedule that they will edit for their class using Excel and Outlook. These schedules will be reviewed and verified by admin. Each semester admin will reflect on the effectiveness of the schedule and revise if needed prior to the new semester.

Communication and Training

At Back-to-School Professional Development, staff will be given the required instructional schedule outlining the requirements for teachers and students in each academic pathway. Teachers will communicate with students and Learning Coaches the importance of attending the required sessions based on their academic pathway. The schedule can be viewed in the OLS and viewing the daily plan.

Student schedules will be discussed with students/families during beginning of the year data conferences. During Meet the Teacher events and orientation sessions teachers will inform students/families of the homeroom sessions available to all students as well as the Circle Time (K-2) and Homeroom (3-5). Live required sessions will be offered to students that are in need. These schedules will be emailed after testing is complete and added to the student's daily plan in the OLS.

Monitoring

Teachers will be given the required instructional schedule that they will edit for their class using excel and outlook. These schedules will be reviewed and verified by admin. Each semester admin will reflect on the effectiveness of the schedule and revise if needed prior to the new semester.

The School Leader and Principals will be conducting Walk Throughs on a consistent weekly basis to ensure that all classes are being held.

28. Based on your proposed model for curriculum, instruction, and assessment, provide a proposed scope and sequence and schedule for each grade level band that applies (K-3, 4-6, 6-8, 9-12) that aligns to your mission and vision. Describe how your team developed or selected the proposed curriculum.

If you are proposing a high school, explain how the proposed scope and sequence will meet and/or exceed the BOE's graduation requirements.

- *Optional- If you plan to add onto the BOE's graduation requirements, please describe your proposal.*

Note: High schools will be expected to meet the BOE's graduation requirements in accordance with BOE Policy 102-15. High schools may be able to deviate from such graduation requirements if a waiver is obtained from BOE. Any deviation from BOE Policy 102-15 requires a waiver from BOE, and Commission approval of an application does not constitute approval of any deviation from BOE's graduation requirements. If the application is approved, it will be incumbent on the proposed school either to: (1) obtain a waiver; or (2) if it cannot obtain a waiver, adjust its graduation requirements to meet BOE Policy 102-15.

To accomplish our mission “to provide a K through 12 world class, adaptive, synchronous and asynchronous virtual learning environment to meet the needs and interests of students across Hawai'i wherever they are academically, physically, socially, and/or culturally and to prepare them for success in their chosen college or career path, in alignment with their individual kuleana” and our vision “to create a charter school that continuously paves new pathways for virtual education, leveraging technology and innovative teaching methods to advance education for all student populations”, we selected the K12 curriculum for LNCA. A scope and sequence for grade level bands K-3, 4-5, 6-8, and 9-12, aligned to LNCA's mission and vision, is provided in **Attachment 28 – ACAD**. The proposed school calendar and bell schedule in **Attachment 27 – ACAD** meets collective bargaining requirements at the time this application was submitted and will be reviewed and revised as needed to meet collective bargaining requirements at the time the School opens. The LNCA Board does not have first-hand experience using the K12 curriculum, but the Board has met with K12 representatives in Hawai'i and has participated in lesson demonstrations of K12's curriculum; discussed alignment with Hawai'i Subject Matter Standards; discussed the use of live instruction and asynchronous lessons in their instructional program; and other components of a career education program that could be implemented at LNCA. The LNCA Board has met via Zoom with the K12 CTE team to discuss pathways that best fit the needs of business and industries that the Board members represent in Hawai'i. K12 representatives have also discussed with the LNCA Board K12's strategic partnerships with Tallo and Nepris and how those programs will benefit Hawai'i's students.

The LNCA Board has learned that K12's curriculum is intentionally designed to meet the needs of diverse learners. K12's curriculum development team uses state standards as the roadmap for what content to include in each course. Using a reverse design approach, the team aligns state standards into discrete learning objectives in order to determine what a student should

Attachment 28 - ACAD

know and be able to do by the end of a course. This drives the development of comprehensive assessments that can be used to evaluate student mastery of standards at the level of understanding required by each standard. Curriculum teams then organize content into units, lessons, and activities that scaffold instruction using sound pedagogical principles and the most relevant research in learning science to support the learner in obtaining the depth of knowledge required by state-approved standards.

K12 has a Curriculum and Product Research team dedicated to reviewing and synthesizing research for course development teams. Both secondary research—cornerstone and cutting-edge research studies on curriculum and online learning completed by experts in their fields—and primary research—research on the efficacy and varying aspects of the curriculum are conducted in house and by third parties. K12’s curriculum is regularly updated based on the information from that research. From the amount of instructional time per subject and frequency and length of brain breaks, to the sequence and coherence of content to types of assessments, all modifications to the curriculum are evidence-based, data-driven, and backed by empirical research proven to be effective in improving learning. Please see a full explanation of the research basis of the K12 curriculum included in **Attachment 28 – ACAD**.

In addition to being standards-driven and research-based, K12’s curriculum is designed using the following guiding principles:

- *Accessibility*: K12 aligns with the international standards in Web Content Accessibility Guidelines (WCAG) 2.0 Level AA, and they are working toward implementing WCAG 2.1 Level AA.
- *Customizable*: K12’s curriculum is customizable by either curriculum designers—or at the teacher level—to meet state requirements.
- *Interactive and Engaging*: K12’s curriculum is designed expressly for a digital learning environment (including mobile devices), and infused with media, video, and interactivity to enhance learning and engage students.
- *Multicultural, Diverse, and Inclusive*: K12 seeks to use content and assessment items that are free from bias and that represent diversity, including literature (including topics, characters/central figures, and authors), imagery/media, and video/voice talent.
- *Personalization*: K12’s curriculum is created with the capacity for content delivery adjustment to meet students’ diverse instructional needs.

The proposed scope and sequence in **Attachment 28 – ACAD** will meet the BOE graduation requirements in accordance with BOE Policy 102-15:

Course Requirements	Hawai'i High School Diploma
English	4.0 credits including English Language Arts 1 (1 credit), English Language Arts 2 (1 credit), and Expository Writing (0.5 credit) and 1.5 credits of common core aligned language arts electives or proficiency-based equivalents

Attachment 28 - ACAD

Social Studies	4.0 credits including U.S. History and Government (1 credit), World History and Culture (1 credit), Modern History of Hawaii (0.5 credit) and Participation in a Democracy (0.5 credit) and 1 credit of standards based social studies elective or proficiency-based equivalent
Mathematics**	3.0 credits including Algebra 1 (1 credit), Geometry (1 credit) and 1 credit of common core aligned math elective or proficiency-based equivalent
Science	3.0 credits including Biology and 2 credits of standards-based science electives or proficiency-based equivalents
World Language Fine Arts Career and Technical Education	2.0 credits in one of the specified programs of study or proficiency-based equivalents
Physical Education	1.0 credit or proficiency-based equivalent
Health	0.5 credit or proficiency-based equivalent
Personal/ Transition Plan	0.5 credit
Electives	6.0 credits
Total	24.0 credits

Every high school student will have a Personal/Transition Plan aligned with state graduation requirements to strategically guide and keep them on track towards graduation. As part of a comprehensive instructional model, the School will establish a Multi-Tiered System of Supports (MTSS) approach to the early identification and support of student learning including in the case of students who are at risk of dropping out or not meeting graduation requirements (see **Attachment 30 – ACAD**). The model is used to efficiently differentiate instruction for all students and incorporates increasing rigor in instruction, offering specific, research-based interventions matched to student needs. Throughout the MTSS process, student progress is monitored frequently during instruction to examine student achievement and gauge the effectiveness of the instruction. Struggling learners are provided with interventions at increasing levels of intensity to accelerate their rate of learning. Decisions about the intensity and duration of interventions are based on individual student response to instruction and integrated as part of the instructional cycles.

Attachment 28 - ACAD

For students who need to recover credits to meet graduation requirements and to be on track to graduate in four years, the School will provide them with several options personalized to their individual needs—a multiple pathway approach—which will work within the School’s calendar. Examples could include:

- Credit Recovery Courses: mastery-based courses that allow students to “test out” of content for which they demonstrate mastery, e.g., when students have had exposure to the course content before and have been unsuccessful
- Full course re-takes
- Additional courses added to a student’s schedule for students who have demonstrated an ability to keep up with current course work
- Flex schedule providing evening synchronous and asynchronous support for students for whom traditional school day hours are not ideal

Graduation Guarantee

Dropping out of high school is a nationwide problem, with two million students leaving school before graduating each year. According to the U.S. Bureau of Labor Statistics, workers without a high school diploma have the highest rate of unemployment and the lowest median weekly earnings. Beginning with their first graduation cohort of six students in 2007, K12 managed public schools has graduated 78,395 students to date—including 11,775 students who graduated from online and blended schools in 2021-2022. K12’s graduation rates have risen steadily over the past five years thanks to excellence in teaching and online learning support, personalized graduation plans, and individual counseling. K12 is so confident in their proven online learning approach that they guarantee that eligible students enrolled in a K12-powered full-time public school will graduate from high school. If a student does not attain the necessary credits to graduate at their K12-powered public school before reaching the age limit at their school, K12 will cover tuition at a K12 private school of K12’s choice, or provide other remediation, until the student has sufficient credits to earn a high school diploma. Students graduating from K12 virtual schools have enrolled in hundreds of higher education institutions. They can be found attending selective universities, schools of liberal arts, culinary arts, business, fine arts, and top technology and fashion institutes, among others. Graduates are also going into careers in the military, apprenticeship programs, on the job training, or directly into the workforce.

Grade Band K-3	Kindergarten Math	Math K is designed to provide students with a strong foundation in mathematical concepts. Students master content through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice, both online and offline. Teacher-led instruction engages students using online resources, including virtual manipulatives, videos demonstrating concepts with physical manipulatives, and videos teaching concepts through song. During independent practice, students solve problems online, often working with virtual manipulatives, and offline in an activity book. The Math K curriculum begins with a heavy emphasis on numbers and counting, leading to an understanding of addition and subtraction. Throughout the Math K course, students also explore mathematical concepts found around them in the world, including clocks and calendars, position and patterns, subitizing, shapes, measurable attributes, and money.
	First Grade Math	Math 1 continues to build a strong foundation in mathematical concepts. Students master content through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice. The Math 1 curriculum focuses on numbers and counting, data representations, addition and subtraction, story problems, length, time, shapes, and place value. Throughout the Math 1 course, students review mathematical concepts found around them in the world. They also master addition and subtraction math facts through 10.
	Second Grade Math	Math 2 is designed to support true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built in for individualized independent practice, games, and offline practice, Math 2 includes the tools and technology that students need to succeed. Math 2 focuses on numbers through 1,000; time and money; two-digit addition and subtraction; length; story problems; shapes; number patterns; and data displays.
	Third Grade Math	Math 3 is designed to support true depth of knowledge required by today's standards. It continues to include the tools and technology that students need to succeed in a blended learning environment. Math 3 focuses on reviewing patterns and number sense; discovering addition, subtraction, multiplication, and division strategies; exploring shapes and calculating area; learning about fractions and equivalent fractions; measuring time, length, liquid volume, and mass; and exploring and making data displays.
Grade Band 4-5	Fourth Grade Math	Math 4 is designed to support true depth of knowledge required by today's standards. With rich content to form conceptual understanding and enough practice to support mastery, including time built-in for individualized independent practice, games, and offline practice, Math 4 includes the tools and technology that students need to succeed in a blended learning environment. Math 4 focuses on expanding understanding of operations with whole numbers, developing a greater understanding of fractions, discovering decimals and their relationship to fractions, and exploring geometric figures.
	Fifth Grade Math	Math 5 continues to include the tools and technology that students need to succeed in a blended learning environment. Math 5 focuses on expanding understanding of operations with fractions, developing a greater fluency with operations with multidigit numbers, expanding understanding of decimals, and learning to perform operations with decimals, learning about the coordinate plane, and exploring volume.

Grade Band 6-8	Sixth Grade Math	In K12's Grade 6 mathematics course, students deepen their understanding of multiplication and division of fractions to apply their knowledge to divide fractions by fractions, with an additional focus on increasing efficiency and fluency. Students gain a foundation in the concepts of ratio and rate as an extension of their work with whole number multiplication and division, and in preparation for work with proportional relationships in Grade 7. Students also make connections among area, volume, and surface area, and continue to lay the groundwork for deep algebraic understanding by interpreting and using expressions and equations.
	Seventh Grade Math	In K12's Grade 7 mathematics course, students focus on real-world scenarios and mathematical problems involving algebraic expressions and linear equations and begin to apply their understanding of rational numbers with increased complexity. The course lays the foundation for exploring concepts of angle, similarity and congruence, more formally addressed in Grade 8, as students work with scale drawings and construct and analyze relationships among geometric figures. Students also develop and apply understandings of proportional relationships.
	Eighth Grade Math	K12's Grade 8 mathematics course prepares students for more advanced study in algebra as students solve linear equations and systems of equations, work with radical and integer exponents, gain conceptual understanding of functions, and use functions to model quantitative relationships. To prepare students for more advanced study in geometry, the course emphasizes the Pythagorean theorem and a deepening exploration of similarity and congruence.
Grade Band 9-12	Algebra 1	K12's Algebra 1 course is intended to formalize and extend the mathematics that students learned in the middle grades. In this course, students deepen their understanding of linear and exponential relationships by contrasting them with each other. Students also apply linear models to data that exhibit a linear trend. The course also covers analyzing, solving, and using quadratic functions.
	Geometry	K12's Geometry course builds on the geometry covered in middle school to explore more complex geometric situations and deepen students' ability to explain geometric relationships, moving toward formal mathematical arguments. Specific topics include similarity and congruence, analytic geometry, circles, the Pythagorean theorem, right triangle trigonometry, analysis of three-dimensional objects, conic sections, and geometric modeling.
	Algebra 2	In K12's Algebra 2 course, students build on their work with linear, quadratic, and exponential functions, and extend their repertoire to include polynomial, rational, radical, and trigonometric functions. Students also expand their ability to model situations and solve equations, including solving quadratic equations over the set of complex numbers and solving exponential equations using the properties of logarithms. The course covers sequences and series, probability distributions, and more advanced data analysis techniques.

16	Resources	11	Measurable Attributes CCSS.Math.Content.K.MD.A.2	Describe and compare measurable attributes. Directly compare two objects with a measurable attribute in common, to see which object has "more of"/"less of" the attribute, and describe the difference.
16	Resources	12	Add within 10 CCSS.Math.Content.K.CC.A.1	Know number names and the count sequence. Count to 100 by ones and by tens.
16	Resources	12	Add within 10 CCSS.Math.Content.K.CC.C.6	Compare numbers. Identify whether the number of objects in one group is greater than, less than, or equal to the number of objects in another group, e.g., by using matching and counting strategies.
16	Resources	12	Add within 10 CCSS.Math.Content.K.OA.A.1	Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Represent addition and subtraction with objects, fingers, mental images, drawings, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.
16	Resources	13	Subtract within 10 CCSS.Math.Content.1.OA.C.6	Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., $8 + 6 = 8 + 2 + 4 = 10 + 4 = 14$); decomposing a number leading to a ten (e.g., $13 - 4 = 13 - 3 - 1 = 10 - 1 = 9$); using the relationship between addition and subtraction (e.g., knowing that $8 + 4 = 12$, one knows $12 - 8 = 4$); and creating equivalent but easier or known sums (e.g., adding $6 + 7$ by creating the known equivalent $6 + 6 + 1 = 12 + 1 = 13$).
16	Resources	13	Subtract within 10 CCSS.Math.Content.K.OA.A.1	Understand addition as putting together and adding to, and understand subtraction as taking apart and taking from. Represent addition and subtraction with objects, fingers, mental images, drawings, sounds (e.g., claps), acting out situations, verbal explanations, expressions, or equations.
16	Resources	14	Shapes and Solids CCSS.Math.Content.K.CC.B.5	Count to tell the number of objects. Count to answer "how many?" questions about as many as 20 things arranged in a line, a rectangular array, or a circle, or as many as 10 things in a scattered configuration; given a number from 1—20, count out that many objects.
16	Resources	14	Shapes and Solids CCSS.Math.Content.K.G.A.1	Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres). Describe objects in the environment using names of shapes, and describe the relative positions of these objects using terms such as above, below, beside, in front of, behind, and next to.
16	Resources	14	Shapes and Solids CCSS.Math.Content.K.G.A.2	Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres). Correctly name shapes regardless of their orientations or overall size.

Attachment 28 - ACAD					
16	Resources	14	Shapes and Solids	CCSS.Math.Content.K.G.A.3	Identify and describe shapes (squares, circles, triangles, rectangles, hexagons, cubes, cones, cylinders, and spheres). Identify shapes as two-dimensional (lying in a plane, "flat") or three-dimensional ("solid").
16	Resources	14	Shapes and Solids	CCSS.Math.Content.K.G.B.4	Analyze, compare, create, and compose shapes. Analyze and compare two- and three-dimensional shapes, in different sizes and orientations, using informal language to describe their similarities, differences, parts (e.g., number of sides and vertices/"corners") and other attributes (e.g., having sides of equal length).
16	Resources	14	Shapes and Solids	CCSS.Math.Content.K.G.B.5	Analyze, compare, create, and compose shapes. Model shapes in the world by building shapes from components (e.g., sticks and clay balls) and drawing shapes.
16	Resources	15	End-of-Year Project	CCSS.Math.Content.1.MD.A.2	Express the length of an object as a whole number of length units, by laying multiple copies of a shorter object (the length unit) end to end; understand that the length measurement of an object is the number of same-size length units that span it with no gaps or overlaps.
16	Resources	15	End-of-Year Project	CCSS.Math.Content.K.G.B.5	Analyze, compare, create, and compose shapes. Model shapes in the world by building shapes from components (e.g., sticks and clay balls) and drawing shapes.

1	Numbers and Counting	1	Introduction to Math 1	N/A	Students are introduced to the Math 1 course.
1	Numbers and Counting	2	Numbers to 120 (A)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
1	Numbers and Counting	2	Numbers to 120 (A)	CCSS.Math.Content.1.OA.C.6	Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., $8 + 6 = 8 + 2 + 4 = 10 + 4 = 14$); decomposing a number leading to a ten (e.g., $13 - 4 = 13 - 3 - 1 = 10 - 1 = 9$); using the relationship between addition and subtraction (e.g., knowing that $8 + 4 = 12$, one knows $12 - 8 = 4$); and creating equivalent but easier or known sums (e.g., adding $6 + 7$ by creating the known equivalent $6 + 1 = 7 + 1 = 8$).
1	Numbers and Counting	3	Numbers to 120 (B)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
1	Numbers and Counting	4	Numbers to 120 (C)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
1	Numbers and Counting	4	Numbers to 120 (C)	CCSS.Math.Content.1.OA.C.6	Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. Use strategies such as counting on; making ten (e.g., $8 + 6 = 8 + 2 + 4 = 10 + 4 = 14$); decomposing a number leading to a ten (e.g., $13 - 4 = 13 - 3 - 1 = 10 - 1 = 9$); using the relationship between addition and subtraction (e.g., knowing that $8 + 4 = 12$, one knows $12 - 8 = 4$); and creating equivalent but easier or known sums (e.g., adding $6 + 7$ by creating the known equivalent $6 + 1 = 7 + 1 = 8$).
1	Numbers and Counting	5	Numbers to 120 (D)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
1	Numbers and Counting	6	Numbers to 120 (E)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
1	Numbers and Counting	7	Counting Money (A)	CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.

15	Resources	9	Change Story Problems CCSS.Math.Content.1.OA.A.1	Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.
15	Resources	10	Compare Story Problems CCSS.Math.Content.1.OA.A.1	Use addition and subtraction within 20 to solve word problems involving situations of adding to, taking from, putting together, taking apart, and comparing, with unknowns in all positions, e.g., by using objects, drawings, and equations with a symbol for the unknown number to represent the problem.
15	Resources	11	Shapes CCSS.Math.Content.1.G.A.2	Compose two-dimensional shapes (rectangles, squares, trapezoids, triangles, half-circles, and quarter-circles) or three-dimensional shapes (cubes, right rectangular prisms, right circular cones, and right circular cylinders) to create a composite shape, and compose new shapes from the composite shape.
15	Resources	11	Shapes CCSS.Math.Content.1.G.A.3	Partition circles and rectangles into two and four equal shares, describe the shares using the words halves, fourths, and quarters, and use the phrases half of, fourth of, and quarter of. Describe the whole as two of, or four of the shares. Understand for these examples that decomposing into more equal shares creates smaller shares.
15	Resources	12	Place Value CCSS.Math.Content.1.NBT.A.1	Count to 120, starting at any number less than 120. In this range, read and write numerals and represent a number of objects with a written numeral.
15	Resources	12	Place Value CCSS.Math.Content.1.NBT.C.5	Given a two-digit number, mentally find 10 more or 10 less than the number, without having to count; explain the reasoning used.
15	Resources	12	Place Value CCSS.Math.Content.1.OA.C.6	Add and subtract within 20, demonstrating fluency for addition and subtraction within 10. 6	Division Equations and Strategies	5	Division Equations (E)	CCSS.Math.Content.3.OA.C.7	Multiply and divide within 100. Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.
6	Division Equations and Strategies	6	Your Choice	N/A	Students can use this lesson time to do any of the following. Catch up on work from earlier lessons. Practice in Stride. Practice your Math Facts. Prepare for upcoming tests.
6	Division Equations and Strategies	7	Problem Solving with Division (A)	CCSS.Math.Content.3.OA.A.2	Represent and solve problems involving multiplication and division. Interpret whole-number quotients of whole numbers, e.g., interpret $56 \div 8$ as the number of objects in each share when 56 objects are partitioned equally into 8 shares, or as a number of shares when 56 objects are partitioned into equal shares of 8 objects each.
6	Division Equations and Strategies	7	Problem Solving with Division (A)	CCSS.Math.Content.3.OA.A.3	Represent and solve problems involving multiplication and division. Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.
6	Division Equations and Strategies	8	Problem Solving with Division (B)	CCSS.Math.Content.3.OA.A.3	Represent and solve problems involving multiplication and division. Use multiplication and division within 100 to solve word problems in situations involving equal groups, arrays, and measurement quantities, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem.

1	Whole Number Sense	1	Comparing with Multiplication and Division (A)	CCSS.Math.Content.3.OA.A.1	Interpret products of whole numbers, e.g., interpret 5×7 as the total number of objects in 5 groups of 7 objects each.
1	Whole Number Sense	1	Comparing with Multiplication and Division (A)	CCSS.Math.Content.4.OA.A.1	Use the four operations with whole numbers to solve problems. Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.
1	Whole Number Sense	1	Comparing with Multiplication and Division (A)	CCSS.Math.Content.4.OA.A.2	Use the four operations with whole numbers to solve problems. Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for the unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.
1	Whole Number Sense	1	Comparing with Multiplication and Division (A)	CCSS.Math.Content.4.OA.A.3	Use the four operations with whole numbers to solve problems. Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.
1	Whole Number Sense	2	Comparing with Multiplication and Division (B)	CCSS.Math.Content.3.OA.A.7	Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.

2	Multiplication with Fractions	5	Your Choice	N/A	Students can use this lesson time to do any of the following. Catch up on work from earlier lessons. Practice in Stride. Practice your Math Facts. Prepare for upcoming tests.
2	Multiplication with Fractions	6	Fractions Greater Than One (A)	CCSS.Math.Content.3.NF.A.3c	Express whole numbers as fractions, and recognize fractions that are equivalent to whole numbers.
2	Multiplication with Fractions	6	Fractions Greater Than One (A)	CCSS.Math.Content.4.NF.B.3c	Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers. Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.
2	Multiplication with Fractions	6	Fractions Greater Than One (A)	CCSS.Math.Content.4.NF.B.4a	Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers. Apply and extend previous understandings of multiplication to multiply a fraction by a whole number. Understand a fraction a/b as a multiple of $1/b$.
2	Multiplication with Fractions	7	Fractions Greater Than One (B)	CCSS.Math.Content.3.OA.C.7	Fluently multiply and divide within 100, using strategies such as the relationship between multiplication and division (e.g., knowing that $8 \times 5 = 40$, one knows $40 \div 5 = 8$) or properties of operations. By the end of Grade 3, know from memory all products of two one-digit numbers.
2	Multiplication with Fractions	7	Fractions Greater Than One (B)	CCSS.Math.Content.4.NF.B.3c	Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers. Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$. Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.
2	Multiplication with Fractions	7	Fractions Greater Than One (B)	CCSS.Math.Content.4.NF.B.4c	Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers. Apply and extend previous understandings of multiplication to multiply a fraction by a whole number. Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem.

4	Angles and Their Measurements	1	Concepts of Angle Size (A)	CCSS.Math.Content.3. MD.B.4	Generate measurement data by measuring lengths using rulers marked with halves and fourths of an inch. Show the data by making a line plot, where the horizontal scale is marked off in appropriate units— whole numbers, halves, or quarters.
4	Angles and Their Measurements	1	Concepts of Angle Size (A)	CCSS.Math.Content.4.G .A.1	Draw and identify lines and angles, and classify shapes by properties of their lines and angles. Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.
4	Angles and Their Measurements	1	Concepts of Angle Size (A)	CCSS.Math.Content.4. MD.C.5a	Geometric measurement: understand concepts of angle and measure angles. Recognize angles as geometric shapes that are formed wherever two rays share a common endpoint, and understand concepts of angle measurement: An angle is measured with reference to a circle with its center at the common endpoint of the rays, by considering the fraction of the circular arc between the points where the two rays intersect the circle. An angle that turns through $1/360$ of a circle is called a "one-degree angle," and can be used to measure angles.

9	Decimals	5	Comparing Decimals (A)	CCSS.Math.Content.4.NBT.A.2	Read and write multi-digit whole numbers using base-ten numerals, number names, and expanded form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons.
9	Decimals	5	Comparing Decimals (A)	CCSS.Math.Content.4.NF.C.7	Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual model.
9	Decimals	5	Comparing Decimals (A)	CCSS.Math.Content.5.NBT.A.3b	Understand the place value system. Read, write, and compare decimals to thousandths. Compare two decimals to thousandths based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons.
9	Decimals	6	Comparing Decimals (B)	CCSS.Math.Content.3.NBT.A.3	Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g., 9×80 , 5×60) using strategies based on place value and properties of operations.
9	Decimals	6	Comparing Decimals (B)	CCSS.Math.Content.4.NBT.B.5	Multiply a whole number of up to four digits by a one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
9	Decimals	6	Comparing Decimals (B)	CCSS.Math.Content.5.NBT.A.3b	Understand the place value system. Read, write, and compare decimals to thousandths. 9	Decimals	15	Big Ideas: Challenge Problems	CCSS.Math.Content.5.MD.A.1 Convert like measurement units within a given measurement system. Convert among different-sized standard measurement units within a given measurement system (e.g., convert 5 cm to 0.05 m), and use these conversions in solving multi-step, real world problems.
9	Decimals	15	Big Ideas: Challenge Problems	CCSS.Math.Content.5.NF.B.4 Apply and extend previous understandings of multiplication and division to multiply and divide fractions. Apply and extend previous understandings of multiplication to multiply a fraction or whole number by a fraction.
9	Decimals	15	Big Ideas: Challenge Problems	CCSS.Math.Content.5.NF.B.6 Apply and extend previous understandings of multiplication and division to multiply and divide fractions. Solve real world problems involving multiplication of fractions and mixed numbers, e.g., by using visual fraction models or equations to represent the problem.
10	Addition and Subtraction of Decimals	1	Decimal Addition (A)	CCSS.Math.Content.4.NBT.B.4 Fluently add and subtract multi-digit whole numbers using the standard algorithm.
10	Addition and Subtraction of Decimals	1	Decimal Addition (A)	CCSS.Math.Content.5.NBT.B.7 Perform operations with multi-digit whole numbers and with decimals to hundredths. Add, subtract, multiply, and divide decimals to hundredths, using concrete models or drawings and strategies based on place value, properties of operations, and/or the relationship between addition and subtraction; relate the strategy to a written method and explain the reasoning used.
10	Addition and Subtraction of Decimals	1	Decimal Addition (A)	CCSS.Math.Content.5.NF.A.2 Use equivalent fractions as a strategy to add and subtract fractions. Solve word problems involving addition and subtraction of fractions referring to the same whole, including cases of unlike denominators, e.g., by using visual fraction models or equations to represent the problem. Use benchmark fractions and number sense of fractions to estimate mentally and assess the reasonableness of answers.
10	Addition and Subtraction of Decimals	2	Decimal Addition (B)	CCSS.Math.Content.3.NBT.A.3 Multiply one-digit whole numbers by multiples of 10 in the range 10–90 (e.g., 9×80 , 5×60) using strategies based on place value and properties of operations.

13	Points on a Coordinate Plane	10	Big Ideas: Mini-Project	CCSS.Math.Content.5.G.A.1 Graph points on the coordinate plane to solve real-world and mathematical problems. Use a pair of perpendicular number lines, called axes, to define a coordinate system, with the intersection of the lines (the origin) arranged to coincide with the 0 on each line and a given point in the plane located by using an ordered pair of numbers, called its coordinates. Understand that the first number indicates how far to travel from the origin in the direction of one axis, and the second number indicates how far to travel in the direction of the second axis, with the convention that the names of the two axes and the coordinates correspond (e.g., x-axis and x-coordinate, y-axis and y-coordinate).

A	1	Number Properties	1	Divide Whole Numbers 1	CCSS.Math.Content.4.NBT.A.1	Generalize place value understanding for multi-digit whole numbers. Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right.
A	1	Number Properties	1	Divide Whole Numbers 1	CCSS.Math.Content.6.NS.B.2	Compute fluently with multi-digit numbers and find common factors and multiples. Fluently divide multi-digit numbers using the standard algorithm.
A	1	Number Properties	2	Divide Whole Numbers 2	CCSS.Math.Content.5.NBT.B.6	Perform operations with multi-digit whole numbers and with decimals to hundredths. Find whole-number quotients of whole numbers with up to four-digit dividends and two-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.
A	1	Number Properties	2	Divide Whole Numbers 2	CCSS.Math.Content.6.NS.B.2	Compute fluently with multi-digit numbers and find common factors and multiples. Fluently divide multi-digit numbers using the standard algorithm.
A	1	Number Properties	3	Another Way to Use the Algorithm	CCSS.Math.Content.5.NBT.B.5	Perform operations with multi-digit whole numbers and with decimals to hundredths. Fluently multiply multi-digit whole numbers using the standard algorithm.
A	1	Number Properties	3	Another Way to Use the Algorithm	CCSS.Math.Content.6.NS.B.2	Compute fluently with multi-digit numbers and find common factors and multiples. Fluently divide multi-digit numbers using the standard algorithm.
A	1	Number Properties	4	Factors and Prime Factorization	CCSS.Math.Content.4.OA.B.4	Gain familiarity with factors and multiples. Find all factor pairs for a whole number in the range 1—100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1—100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1—100 is prime or composite.
A	1	Number Properties	4	Factors and Prime Factorization	CCSS.Math.Content.6.NS.B.4	Compute fluently with multi-digit numbers and find common factors and multiples. Find the greatest common factor of two whole numbers less than or equal to 100 and the least common multiple of two whole numbers less than or equal to 12. Use the distributive property to express a sum of two whole numbers 1—100 with a common factor as a multiple of a sum of two whole numbers with no common factor.

B	5	Statistics	5	Multiple Samples from a Population CCSS.Math.Content.6.SP.A.2	Develop understanding of statistical variability. Understand that a set of data collected to answer a statistical question has a distribution which can be described by its center, spread, and overall shape.
B	5	Statistics	5	Multiple Samples from a Population CCSS.Math.Content.7.SP.A.1	Use random sampling to draw inferences about a population. Understand that statistics can be used to gain information about a population by examining a sample of the population; generalizations about a population from a sample are valid only if the sample is representative of that population. Understand that random sampling tends to produce representative samples and support valid inferences.
B	5	Statistics	5	Multiple Samples from a Population CCSS.Math.Content.7.SP.A.2	Use random sampling to draw inferences about a population. Use data from a random sample to draw inferences about a population with an unknown characteristic of interest. Generate multiple samples (or simulated samples) of the same size to gauge the variation in estimates or predictions.
B	5	Statistics	6	Compare Line Plots CCSS.Math.Content.6.SP.B.4	Summarize and describe distributions. Display numerical data in plots on a number line, including dot plots, histograms, and box plots.
B	5	Statistics	6	Compare Line Plots CCSS.Math.Content.7.SP.B.3	Draw informal comparative inferences about two populations. Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability.
B	5	Statistics	6	Compare Line Plots CCSS.Math.Content.7.SP.B.4	Draw informal comparative inferences about two populations. Use measures of center and measures of variability for numerical data from random samples to draw informal comparative inferences about two populations.
B	5	Statistics	6	Compare Line Plots CCSS.Math.Practice.MP5	Use appropriate tools strategically.
B	5	Statistics	7	Use Statistical Measures CCSS.Math.Content.6.SP.B.5c	Summarize and describe distributions. Summarize numerical data sets in relation to their context, such as by: Giving quantitative measures of center (median and/or mean) and variability (interquartile range and/or mean absolute deviation), as well as describing any overall pattern and any striking deviations from the overall pattern with reference to the context in which the data were gathered.
B	5	Statistics	7	Use Statistical Measures CCSS.Math.Content.7.SP.B.3	Draw informal comparative inferences about two populations. Informally assess the degree of visual overlap of two numerical data distributions with similar variabilities, measuring the difference between the centers by expressing it as a multiple of a measure of variability.

B	6	Probability	1	Understand and Determine Simple Probability 1	CCSS.Math.Content.6.RP.A.2	Understand ratio concepts and use ratio reasoning to solve problems. Understand the concept of a unit rate a/b associated with a ratio $a:b$ with $b \neq 0$, and use rate language in the context of a ratio relationship.
B	6	Probability	1	Understand and Determine Simple Probability 1	CCSS.Math.Content.7.SP.C.5	Investigate chance processes and develop, use, and evaluate probability models. Understand that the probability of a chance event is a number between 0 and 1 that expresses the likelihood of the event occurring. Larger numbers indicate greater likelihood. A probability near 0 indicates an unlikely event, a probability around $1/2$ indicates an event that is neither unlikely nor likely, and a probability near 1 indicates a likely event.
B	6	Probability	1	Understand and Determine Simple Probability 1	CCSS.Math.Content.7.SP.C.7a	Investigate chance processes and develop, use, and evaluate probability models. Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. Develop a uniform probability model by assigning equal probability to all outcomes, and use the model to determine probabilities of events.
B	6	Probability	1	Understand and Determine Simple Probability 1	CCSS.Math.Content.7.SP.C.7b	Investigate chance processes and develop, use, and evaluate probability models. Develop a probability model and use it to find probabilities of events. Compare probabilities from a model to observed frequencies; if the agreement is not good, explain possible sources of the discrepancy. Develop a probability model (which may not be uniform) by observing frequencies in data generated from a chance process.
B	6	Probability	1	Understand and Determine Simple Probability 1	CCSS.Math.Content.7.SP.C.8b	Investigate chance processes and develop, use, and evaluate probability models. Find probabilities of compound events using organized lists, tables, tree diagrams, and simulation. Represent sample spaces for compound events using methods such as organized lists, tables and tree diagrams. For an event described in everyday language (e.g., "rolling double sixes"), identify the outcomes in the sample space which compose the event.

B	6	Probability	2	Understand and Determine Simple Probability 2	CCSS.Math.Content.7.EE.B.3	Solve real-life and mathematical problems using numerical and algebraic expressions and equations. Solve multi-step real-life and mathematical problems posed with positive and negative rational numbers in any form (whole numbers, fractions, and decimals), using tools strategically. Apply properties of operations to calculate with numbers in any form; convert between forms as appropriate; and assess the reasonableness of answers using mental computation and estimation strategies.

Semester	Unit #	Unit Title	Lesson #	Lesson Title	Standard Code	Standard Text
A	1	Basic Tools and Transformations	1	Exchange Ideas: Basic Tools and Transformations	CCSS.Math.Content.HSG-CO.A.1	Experiment with transformations in the plane Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
A	1	Basic Tools and Transformations	2	Basic Geometric Terms and Definitions 1	CCSS.Math.Content.6.NS.C.6c	Find and position integers and other rational numbers on a horizontal or vertical number line diagram; find and position pairs of integers and other rational numbers on a coordinate plane.
A	1	Basic Tools and Transformations	2	Basic Geometric Terms and Definitions 1	CCSS.Math.Content.HSG-C.A.4	Understand and apply theorems about circles (+) Construct a tangent line from a point outside a given circle to the circle.
A	1	Basic Tools and Transformations	2	Basic Geometric Terms and Definitions 1	CCSS.Math.Content.HSG-CO.A.1	Experiment with transformations in the plane Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
A	1	Basic Tools and Transformations	3	Basic Geometric Terms and Definitions 2	CCSS.Math.Content.HSG-CO.A.1	Experiment with transformations in the plane Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
A	1	Basic Tools and Transformations	4	Measure Length	CCSS.Math.Content.7.NS.A.1c	Understand subtraction of rational numbers as adding the additive inverse, $p - q = p + (-q)$. Show that the distance between two rational numbers on the number line is the absolute value of their difference, and apply this principle in real-world contexts.
A	1	Basic Tools and Transformations	4	Measure Length	CCSS.Math.Content.8.G.A.1a	Understand congruence and similarity using physical models, transparencies, or geometry software. Verify experimentally the properties of rotations, reflections, and translations: Lines are taken to lines, and line segments to line segments of the same length.
A	1	Basic Tools and Transformations	4	Measure Length	CCSS.Math.Content.HSG-CO.A.1	Experiment with transformations in the plane Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
A	1	Basic Tools and Transformations	4	Measure Length	CCSS.Math.Content.HSG-GMD.A.3	Explain volume formulas and use them to solve problems Use volume formulas for cylinders, pyramids, cones, and spheres to solve problems.
A	1	Basic Tools and Transformations	5	Measure Angles	CCSS.Math.Content.7.G.A.2	Draw (freehand, with ruler and protractor, and with technology) geometric shapes with given conditions. Focus on constructing triangles from three measures of angles or sides, noticing when the conditions determine a unique triangle, more than one triangle, or no triangle.

A	1	Basic Tools and Transformations	5	Measure Angles	Math.Content.7.G.B.5	Use facts about supplementary, complementary, vertical, and adjacent angles in a multi-step problem to write and solve simple equations for an unknown angle in a figure.
A	1	Basic Tools and Transformations	5	Measure Angles	CCSS.Math.Content.8.G.A.1b	Understand congruence and similarity using physical models, transparencies, or geometry software. Verify experimentally the properties of rotations, reflections, and translations: Angles are taken to angles of the same measure.
A	1	Basic Tools and Transformations	5	Measure Angles	CCSS.Math.Content.8.G.A.5	Understand congruence and similarity using physical models, transparencies, or geometry software. Use informal arguments to establish facts about the angle sum and exterior angle of triangles, about the angles created when parallel lines are cut by a transversal, and the angle-angle criterion for similarity of triangles.
A	1	Basic Tools and Transformations	5	Measure Angles	CCSS.Math.Content.HSG-CO.A.1	Experiment with transformations in the plane Know precise definitions of angle, circle, perpendicular line, parallel line, and line segment, based on the undefined notions of point, line, distance along a line, and distance around a circular arc.
A	1	Basic Tools and Transformations	6	Transformations 1	CCSS.Math.Content.8.G.A.1	Understand congruence and similarity using physical models, transparencies, or geometry software. Verify experimentally the properties of rotations, reflections, and translations:
A	1	Basic Tools and Transformations	6	Transformations 1	CCSS.Math.Content.HSG-CO.A.2	Experiment with transformations in the plane Represent transformations in the plane using, e.g., transparencies and geometry software; describe transformations as functions that take points in the plane as inputs and give other points as outputs. Compare transformations that preserve distance and angle to those that do not (e.g., translation versus horizontal stretch).
A	1	Basic Tools and Transformations	6	Transformations 1	CCSS.Math.Content.HSG-CO.A.3	Experiment with transformations in the plane Given a rectangle, parallelogram, trapezoid, or regular polygon, describe the rotations and reflections that carry it onto itself.
A	1	Basic Tools and Transformations	6	Transformations 1	CCSS.Math.Content.HSG-CO.A.4	Experiment with transformations in the plane Develop definitions of rotations, reflections, and translations in terms of angles, circles, perpendicular lines, parallel lines, and line segments.
A	1	Basic Tools and Transformations	6	Transformations 1	CCSS.Math.Content.HSG-CO.A.5	Experiment with transformations in the plane Given a geometric figure and a rotation, reflection, or translation, draw the transformed figure using, e.g., graph paper, tracing paper, or geometry software. Specify a sequence of transformations that will carry a given figure onto another.
A	1	Basic Tools and Transformations	7	Transformations 2	CCSS.Math.Content.8.G.A.1	Understand congruence and similarity using physical models, transparencies, or geometry software. Verify experimentally the properties of rotations, reflections, and translations:

Grade Band K-3	Kindergarten Science	The Kindergarten science curriculum begins with an overview of what science is and who scientists are. Students then focus on plant and animal relationships and analyze the weather. In the last half of the course, students explore how the sun affects their world and explore the interactions between different forces.
	First Grade Science	The first grade curriculum begins with an overview of what science is and how to study it. Students then focus on plant and animal traits and relationships. In the last half of the course, students explore the patterns they see in the sky and examine how sounds and light are used to communicate and help them understand their world.
	Second Grade Science	Science 2 students engage in science and engineering practices as they explore topics such as matter and its interactions, changes to the earth, and plants and animals. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
	Third Grade Science	Science 3 students engage in science and engineering practices as they explore topics such as organisms, the environment, weather, climate, motion, and forces. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
Grade Band 4-5	Fourth Grade Science	Science 4 students engage in science and engineering practices as they explore topics such as energy, waves, information transfer, plant and animal structures, senses, and the earth's features and resources. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
	Fifth Grade Science	Science 5 students engage in science and engineering practices as they explore topics such as matter, organisms, ecosystems, the earth's systems, and the earth's place in the universe. Throughout the course, students conduct investigations using digital tools and simulations. Some labs also include alternative investigations that use household materials.
Grade Band 6-8	Sixth Grade Science	The Earth Science curriculum builds on the natural curiosity of students. By connecting them to the beauty of geological history, the amazing landforms around the globe, the nature of the sea and air, and the newest discoveries about our universe, the curriculum gives students an opportunity to relate to their everyday world. Students will explore topics such as the fundamentals of geology, oceanography, meteorology, and astronomy; the earth's minerals and rocks; the earth's interior; plate tectonics, earthquakes, volcanoes, and the movements of continents; geology and the fossil record; the oceans and the atmosphere; and the solar system and the universe. Lesson assignments help students discover how scientists investigate the science of our planet.
	Seventh Grade Science	The Life Science program invites students to investigate the world of living things—at levels both large and small—by reading, observing, and experimenting with aspects of life on Earth. Students explore an amazing variety of organisms, the complex workings of the cell and cell biology, the relationship between living things and their environments, and discoveries in the world of modern genetics. Students tackle such topics as ecology, microorganisms, animals, plants, cells, animals, species, adaptation, heredity, genetics, and the history of life on Earth. Lesson activities and assignments help students discover how scientists investigate the living world.

Attachment 28: ACAD

	Eighth Grade Science	The Physical Science program introduces students to many aspects of the physical world, focusing first on chemistry and then on physics. The course provides an overview of the physical world and gives students tools and concepts to think clearly about matter, atoms, molecules, chemical reactions, motion, force, momentum, work and machines, energy, waves, electricity, light, and other aspects of chemistry and physics. Among other subjects, students study the structure of atoms; the elements and the Periodic Table; chemical reactions; forces, including gravitational, motion, acceleration, and mass; and energy, including light, thermal, electricity, and magnetism.
Grade Band 9-12	Earth Science	This course provides students with a comprehensive earth science curriculum, focusing on geology, oceanography, astronomy, weather, and climate. The program consists of in-depth online lessons, collaborative activities, virtual laboratories, and hands-on laboratories students can conduct at home. The course prepares students for further studies in geology, meteorology, oceanography, and astronomy courses, and gives them practical experience in implementing scientific methods.
	Biology	In this comprehensive course, students investigate the chemistry of living things: the cell, genetics, evolution, the structure and function of living things, and ecology. The program consists of in-depth online lessons, including extensive animations, collaborative explorations, virtual laboratories, and hands-on laboratory experiments students can conduct at home.
	Chemistry	This comprehensive course gives students a solid basis to move on to future studies. The course provides an in-depth survey of all key areas, including atomic structure, chemical bonding and reactions, solutions, stoichiometry, thermochemistry, organic chemistry, and nuclear chemistry. The course includes direct online instruction, virtual laboratories, and related assessments.
	Physics	This course provides a comprehensive survey of all key areas: physical systems, measurement, kinematics, dynamics, momentum, energy, thermodynamics, waves, electricity, and magnetism, and introduces students to modern physics topics such as quantum theory and the atomic nucleus. The course gives students a solid basis to move on to more advanced courses later in their academic careers. The program consists of online instruction, virtual laboratories, and related assessments.

5	Forces and Interactions	3	Direction and Speed	K-PS2-1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.
5	Forces and Interactions	4	Testing Speed and Direction	CCC.2.K-2.1 Simple tests can be designed to gather evidence to support or refute student ideas about causes.
5	Forces and Interactions	4	Testing Speed and Direction	DCI.ETS1.A.K-2.2 A situation that people want to change or create can be approached as a problem to be solved through engineering.
5	Forces and Interactions	4	Testing Speed and Direction	DCI.ETS1.C.K-2.1 Because there is always more than one possible solution to a problem, it is useful to compare and test designs.
5	Forces and Interactions	4	Testing Speed and Direction	DCI.PS2.A.K-2.1 Pushes and pulls can have different strengths and directions.
5	Forces and Interactions	4	Testing Speed and Direction	DCI.PS2.A.K-2.2 Pushing or pulling on an object can change the speed or direction of its motion and can start or stop it.
5	Forces and Interactions	4	Testing Speed and Direction	K-PS2-1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.
5	Forces and Interactions	4	Testing Speed and Direction	K-PS2-2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or a pull.
5	Forces and Interactions	4	Testing Speed and Direction	SEP.1.K-2.1 Analyze data from tests of an object or tool to determine if it works as intended.
5	Forces and Interactions	4	Testing Speed and Direction	SEP.6.K-2.2 Communicate solutions with others in oral and/or written forms using models and/or drawings that provide detail about scientific ideas.
5	Forces and Interactions	4	Testing Speed and Direction	SEP.7.K-2.1 With guidance, plan and conduct an investigation in collaboration with peers.
5	Forces and Interactions	4	Testing Speed and Direction	SEP.8.1 Scientists use different ways to study the world.
5	Forces and Interactions	5	Faster and Faster	DCI.PS3.C.K-2.1 A bigger push or pull makes things speed up or slow down more quickly.
5	Forces and Interactions	5	Faster and Faster	K-PS2-2 Analyze data to determine if a design solution works as intended to change the speed or direction of an object with a push or a pull.
5	Forces and Interactions	6	Collision	DCI.PS2.B.K-2.1 When objects touch or collide, they push on one another and can change motion.
5	Forces and Interactions	7	Pushes and Pulls	DCI.PS2.A.K-2.1 Pushes and pulls can have different strengths and directions.
5	Forces and Interactions	7	Pushes and Pulls	DCI.PS2.A.K-2.2 Pushing or pulling on an object can change the speed or direction of its motion and can start or stop it.
5	Forces and Interactions	7	Pushes and Pulls	DCI.PS3.C.K-2.1 A bigger push or pull makes things speed up or slow down more quickly.
5	Forces and Interactions	7	Pushes and Pulls	K-2.AH.4.1 Scientists use drawings, sketches, and models as a way to communicate ideas.
5	Forces and Interactions	7	Pushes and Pulls	K-PS2-1 Plan and conduct an investigation to compare the effects of different strengths or different directions of pushes and pulls on the motion of an object.
5	Forces and Interactions	7	Pushes and Pulls	SEP.4.K-2.1 Use a model to represent relationships in the natural world.
5	Forces and Interactions	7	Pushes and Pulls	SEP.6.K-2.2 Communicate solutions with others in oral and/or written forms using models and/or drawings that provide detail about scientific ideas.
5	Forces and Interactions	7	Pushes and Pulls	SEP.7.K-2.1 With guidance, plan and conduct an investigation in collaboration with peers.
5	Forces and Interactions	8	Pushes and Pulls Wrap-Up	DCI.ETS1.C.K-2.1 Because there is always more than one possible solution to a problem, it is useful to compare and test designs.
5	Forces and Interactions	8	Pushes and Pulls Wrap-Up	DCI.PS2.A.K-2.1 Pushes and pulls can have different strengths and directions.
5	Forces and Interactions	8	Pushes and Pulls Wrap-Up	DCI.PS2.B.K-2.1 When objects touch or collide, they push on one another and can change motion.

5	Forces and Interactions	8	Pushes and Pulls Write a paragraph explaining how a bigger push or pull makes things speed up or slow down more quickly.

2	Plant and Animal Adaptations	1	An Animal's Body	Attachment 28 - ACAD 6.K-2.1	The shape and stability of structures of natural and designed objects are related to their function(s).
2	Plant and Animal Adaptations	1	An Animal's Body	DCI.LS1.A.K-2.1	All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water and air. Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow.
2	Plant and Animal Adaptations	1	An Animal's Body	DCI.LS1.D.K-2.1	Animals have body parts that capture and convey different kinds of information needed for growth and survival. Animals respond to these inputs with behaviors that help them survive. Plants also respond to some external inputs.
2	Plant and Animal Adaptations	1	An Animal's Body	K-2.AF.8.1	Read grade-appropriate texts and/or use media to obtain scientific and/or technical information to determine patterns in and/or evidence about the natural and designed world(s).
2	Plant and Animal Adaptations	1	An Animal's Body	K-2-ETS1-2	Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.
2	Plant and Animal Adaptations	1	An Animal's Body	SEP.7.K-2.4	Plan and conduct an investigation collaboratively to produce data to serve as the basis for evidence to answer a question.
2	Plant and Animal Adaptations	2	Animal Input	DCI.LS1.D.K-2.1	Animals have body parts that capture and convey different kinds of information needed for growth and survival. Animals respond to these inputs with behaviors that help them survive. Plants also respond to some external inputs.
2	Plant and Animal Adaptations	2	Animal Input	K-2.AG.4.1	Objects and organisms can be described in terms of their parts.
2	Plant and Animal Adaptations	3	Plants and Their Parts	CCC.6.K-2.1	The shape and stability of structures of natural and designed objects are related to their function(s).
2	Plant and Animal Adaptations	3	Plants and Their Parts	DCI.LS1.A.K-2.1	All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water and air. Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow.
2	Plant and Animal Adaptations	3	Plants and Their Parts	DCI.LS1.D.K-2.1	Animals have body parts that capture and convey different kinds of information needed for growth and survival. Animals respond to these inputs with behaviors that help them survive. Plants also respond to some external inputs.
2	Plant and Animal Adaptations	4	Compare Plants and Animals	CCC.1.K-2.1	Patterns in the natural and human designed world can be observed and used as evidence.
2	Plant and Animal Adaptations	4	Compare Plants and Animals	CCC.6.K-2.1	The shape and stability of structures of natural and designed objects are related to their function(s).
2	Plant and Animal Adaptations	4	Compare Plants and Animals	DCI.LS3.B.K-2.1	Individuals of the same kind of plant or animal are recognizable as similar but can also vary in many ways.
2	Plant and Animal Adaptations	5	Animal Designs	1-LS1-1	Use materials to design a solution to a human problem by mimicking how plants and/or animals use their external parts to help them survive, grow, and meet their needs.
2	Plant and Animal Adaptations	5	Animal Designs	CCC.6.K-2.1	The shape and stability of structures of natural and designed objects are related to their function(s).
2	Plant and Animal Adaptations	5	Animal Designs	CCC.8.K-2.2	Every human-made product is designed by applying some knowledge of the natural world and is built using materials derived from the natural world.

Attachment 28 - ACAD				
2	Plant and Animal Adaptations	5	Animal Designs	K-2.ETS1-2 Develop a simple sketch, drawing, or physical model to illustrate how the shape of an object helps it function as needed to solve a given problem.
2	Plant and Animal Adaptations	5	Animal Designs	SEP.3.K-2.1 Use tools and materials provided to design and build a device that solves a specific problem or a solution to a specific problem.
2	Plant and Animal Adaptations	5	Animal Designs	SEP.8.2 Science investigations begin with a question.
2	Plant and Animal Adaptations	6	Adaptations Wrap-Up	CCC.6.K-2.1 The shape and stability of structures of natural and designed objects are related to their function(s).
2	Plant and Animal Adaptations	6	Adaptations Wrap-Up	DCI.LS1.A.K-2.1 All organisms have external parts. Different animals use their body parts in different ways to see, hear, grasp objects, protect themselves, move from place to place, and seek, find, and take in food, water and air. Plants also have different parts (roots, stems, leaves, flowers, fruits) that help them survive and grow.

4	Earth	9	Fresh Water	Attachment 28 - ACAD 2.5.2	Describe and graph quantities such as area and volume to address scientific questions.
4	Earth	10	Weather Patterns	CCC.11.3-5.3	Science assumes consistent patterns in natural systems.
4	Earth	10	Weather Patterns	SEP.11.2	Science explanations describe the mechanisms for natural events.
4	Earth	11	Lab: Earth's Systems 1	5-ESS2-1	Develop a model using an example to describe ways the geosphere, biosphere, hydrosphere, and/or atmosphere interact.
4	Earth	11	Lab: Earth's Systems 1	5-ESS2-2	Describe and graph the amounts and percentages of water and fresh water in various reservoirs to provide evidence about the distribution of water on Earth.
4	Earth	11	Lab: Earth's Systems 1	DCI.ESS2.A.3-5.3	Earth's major systems are the geosphere (solid and molten rock, soil, and sediments), the hydrosphere (water and ice), the atmosphere (air), and the biosphere (living things, including humans). These systems interact in multiple ways to affect Earth's surface materials and processes. The ocean supports a variety of ecosystems and organisms, shapes landforms, and influences climate. Winds and clouds in the atmosphere interact with the landforms to determine patterns of weather.

4	Earth	14	Human Activity and Earth	DCI.ESS3.C.3-5.2	Human activities in agriculture, industry, and everyday life have had major effects on the land, vegetation, streams, ocean, air, and even outer space. But individuals and communities are doing things to help protect Earth's resources and environments.
4	Earth	14	Human Activity and Earth	DCI.ETS1.B.3-5.3	At whatever stage, communicating with peers about proposed solutions is an important part of the design process, and shared ideas can lead to improved designs.
4	Earth	15	Protecting Earth	5-ESS3-1	Obtain and combine information about ways individual communities use science ideas to protect the Earth's resources and environment.
