A	1	Earth's Surface	1	Introduction to Science	6-8.AF.3.1	Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.
A	1	Earth's Surface	1	Introduction to Science	6-8.AH.1.2	Science investigations are guided by a set of values to ensure accuracy of measurements, observations, and objectivity of findings.
A	1	Earth's Surface	1	Introduction to Science	CCC.1.6-8.13	Graphs, charts, and images can be used to identify patterns in data.
A	1	Earth's Surface	1	Introduction to Science	CCC.11.6-8.4	Science assumes that objects and events in natural systems occur in consistent patterns that are understandable through measurement and observation.
A	1	Earth's Surface	1	Introduction to Science	CCC.9.6-8.4	Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.
A	1	Earth's Surface	1	Introduction to Science	MS-ESS2-2	Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.
A	1	Earth's Surface	1	Introduction to Science	SEP.2.6-8.1	Ask questions that can be investigated within the scope of the classroom, outdoor environment, and museums and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles.
A	1	Earth's Surface	1	Introduction to Science	SEP.2.6-8.2	Ask questions to identify and clarify evidence of an argument.
A	1	Earth's Surface	1	Introduction to Science	SEP.7.6-8.4	Collect data to produce data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.
A	1	Earth's Surface	2	Science and Engineering Practices	6-8.AF.3.1	Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.
A	1	Earth's Surface	2	Science and Engineering Practices	6-8.AF.4.1	Construct, analyze, and/or interpret graphical displays of data and/or large data sets to identify linear and nonlinear relationships.
A	1	Earth's Surface	2	Science and Engineering Practices	6-8.AF.4.6	Consider limitations of data analysis (e.g., measurement error), and/or seek to improve precision and accuracy of data with better technological tools and methods (e.g., multiple trials).
A	1	Earth's Surface	2	Science and Engineering Practices	CCC.1.6-8.11	Graphs and charts can be used to identify patterns in data.

A	1	Earth's Surface	3	Physical Systems and Models	6-8.AG.3.1	Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.
A	1	Earth's Surface	3	Physical Systems and Models	6-8.AG.4.1	Systems may interact with other systems; they may have sub-systems and be a part of larger complex systems.
A	1	Earth's Surface	3	Physical Systems and Models	6-8.AG.4.3	Models are limited in that they only represent certain aspects of the system under study.
A	1	Earth's Surface	3	Physical Systems and Models	6-8.AH.3.1	Scientific explanations are subject to revision and improvement in light of new evidence.
A	1	Earth's Surface	3	Physical Systems and Models	6-8.AH.3.3	Science findings are frequently revised and/or reinterpreted based on new evidence.
A	1	Earth's Surface	4	Introduction to Earth Science	MS-ESS2-2	Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.
A	1	Earth's Surface	5	Spheres of the Earth	MS-ESS2-2	Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.
A	1	Earth's Surface	6	Classify Earth's Spheres	6-8.AF.6.2	Construct an explanation using models or representations.
A	1	Earth's Surface	7	Mapping the Earth	6-8.AF.4.2	Use graphical displays (e.g., maps, charts, graphs, and/or tables) of large data sets to identify temporal and spatial relationships.
A	1	Earth's Surface	8	Map Earth's Physical Features	6-8.AF.4.2	Use graphical displays (e.g., maps, charts, graphs, and/or tables) of large data sets to identify temporal and spatial relationships.
A	1	Earth's Surface	8	Map Earth's Physical Features	6-8.AG.1.4	Graphs, charts, and images can be used to identify patterns in data.
A	1	Earth's Surface	9	Topographic Maps	6-8.AF.4.2	Use graphical displays (e.g., maps, charts, graphs, and/or tables) of large data sets to identify temporal and spatial relationships.
A	1	Earth's Surface	10	Digital Maps	6-8.AF.4.2	Use graphical displays (e.g., maps, charts, graphs, and/or tables) of large data sets to identify temporal and spatial relationships.
A	1	Earth's Surface	10	Digital Maps	MS-ESS2-2	Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.
A	1	Earth's Surface	11	Making a Map	6-8.AF.4.2	Use graphical displays (e.g., maps, charts, graphs, and/or tables) of large data sets to identify temporal and spatial relationships.
A	1	Earth's Surface	12	Weathering	DCI.ESS2.A.6-8.5	The planet's systems interact over scales that range from microscopic to global in size, and they operate over fractions of a second to billions of years. These interactions have shaped Earth's history and will determine its future.
A	1	Earth's Surface	12	Weathering	DCI.ESS2.C.6-8.7	Water's movements—both on the land and underground—cause weathering and erosion, which change the land's surface features and create underground formations.
A	1	Earth's Surface	12	Weathering	MS-ESS2-2	Construct an explanation based on evidence for how geoscience processes have changed Earth's surface at varying time and spatial scales.
A	1	Earth's Surface	13	Weathering in Action	DCI.ESS2.A.6-8.5	The planet's systems interact over scales that range from microscopic to global in size, and they operate over fractions of a second to billions of years. These interactions have shaped Earth's history and will determine its future.

B	3	Energy and Earth's Resources	16	Laboratory: Human Impact on the Environment 1	SEP.5.6-8.5	Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.
B	3	Energy and Earth's Resources	16	Laboratory: Human Impact on the Environment 1	SEP.7.6-8.4	Collect data to produce data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	6-8.AF.1.2	Define a design problem that can be solved through the development of an object, tool, process or system and includes multiple criteria and constraints, including scientific knowledge that may limit possible solutions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	6-8.AF.3.4	Collect data to produce data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	6-8.AF.6.6	Apply scientific ideas or principles to design, construct, and/or test a design of an object, tool, process or system.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	6-8.AF.6.7	Undertake a design project, engaging in the design cycle, to construct and/or implement a solution that meets specific design criteria and constraints.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	6-8.AF.7.2	Respectfully provide and receive critiques about one's explanations, procedures, models, and questions by citing relevant evidence and posing and responding to questions that elicit pertinent elaboration and detail.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.10.6-8.3	Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.6.6-8.3	Structures can be designed to serve particular functions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.7.6-8.4	Explanations of stability and change in natural or designed systems can be constructed by examining the changes over time and processes at different scales, including the atomic scale.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.7.6-8.5	Stability might be disturbed either by sudden events or gradual changes that accumulate over time.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.8.6-8.12	All human activity draws on natural resources and has both short and long-term consequences, positive as well as negative, for the health of people and the natural environment.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	CCC.8.6-8.9	The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	DCI.ESS3.A.6-8.3	Humans depend on Earth's land, ocean, atmosphere, and biosphere for many different resources. Minerals, fresh water, and biosphere resources are limited, and many are not renewable or replaceable over human lifetimes. These resources are distributed unevenly around the planet as a result of past geologic processes.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	DCI.ESS3.C.6-8.3	Human activities have significantly altered the biosphere, sometimes damaging or destroying natural habitats and causing the extinction of other species. But changes to Earth's environments can have different impacts (negative and positive) for different living things.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	DCI.ESS3.C.6-8.4	Typically as human populations and per-capita consumption of natural resources increase, so do the negative impacts on Earth unless the activities and technologies involved are engineered otherwise.

Attachment 28 - ACAD						
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	DCI.ESS3.D.6-8.1	Human activities, such as the release of greenhouse gases from burning fossil fuels, are major factors in the current rise in Earth's mean surface temperature (global warming). Reducing the level of climate change and reducing human vulnerability to whatever climate changes do occur depend on the understanding of climate science, engineering capabilities, and other kinds of knowledge, such as understanding of human behavior and on applying that knowledge wisely in decisions and activities.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	DCI.ETS1.B.6-8.10	Models of all kinds are important for testing solutions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	MS-ETS1-1	Define the criteria and constraints of a design problem with sufficient precision to ensure a successful solution, taking into account relevant scientific principles and potential impacts on people and the natural environment that may limit possible solutions.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	MS-ETS1-2	Evaluate competing design solutions using a systematic process to determine how well they meet the criteria and constraints of the problem.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	MS-ETS1-3	Analyze data from tests to determine similarities and differences among several design solutions to identify the best characteristics of each that can be combined into a new solution to better meet the criteria for success.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	MS-ETS1-4	Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.1.6-8.1	Analyze and interpret data to determine similarities and differences in findings.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.3.6-8.2	Apply scientific ideas or principles to design an object, tool, process or system.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.3.6-8.8	Apply scientific principles to design an object, tool, process or system.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.4.6-8.3	Develop and use a model to describe phenomena.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.5.6-8.5	Construct an oral and written argument supported by empirical evidence and scientific reasoning to support or refute an explanation or a model for a phenomenon or a solution to a problem.
B	3	Energy and Earth's Resources	17	Laboratory: Human Impact on the Environment 2	SEP.7.6-8.4	Collect data to produce data to serve as the basis for evidence to answer scientific questions or test design solutions under a range of conditions.

A	1	Organisms	2	Science and Engineering Practices	SEP.9.5	Science disciplines share common rules of obtaining and evaluating empirical evidence.
A	1	Organisms	3	Physical Systems and Models	6-8.AF.2.1	Evaluate limitations of a model for a proposed object or tool.
A	1	Organisms	3	Physical Systems and Models	6-8.AG.3.1	Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.
A	1	Organisms	3	Physical Systems and Models	6-8.AG.4.1	Systems may interact with other systems; they may have sub-systems and be a part of larger complex systems.
A	1	Organisms	3	Physical Systems and Models	6-8.AG.4.3	Models are limited in that they only represent certain aspects of the system under study.
A	1	Organisms	3	Physical Systems and Models	6-8.AH.3.1	Scientific explanations are subject to revision and improvement in light of new evidence.
A	1	Organisms	3	Physical Systems and Models	6-8.AH.3.3	Science findings are frequently revised and/or reinterpreted based on new evidence.
A	1	Organisms	3	Physical Systems and Models	6-8.AH.8.2	Science limits its explanations to systems that lend themselves to observation and empirical evidence.
A	1	Organisms	3	Physical Systems and Models	CCC.3.6-8.7	Phenomena that can be observed at one scale may not be observable at another scale.
A	1	Organisms	3	Physical Systems and Models	SEP.4.6-8.3	Develop and use a model to describe phenomena.
A	1	Organisms	4	Introduction to Life Science	DCI.LS1.A.6-8.3	All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).
A	1	Organisms	4	Introduction to Life Science	DCI.LS2.A.6-8.4	Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.

A	1	Organisms	13	Chemistry of Life	MS-LS1-7	Develop a model to describe how food is rearranged through chemical reactions forming new molecules that support growth and/or release energy as this matter moves through an organism.
A	1	Organisms	14	Molecules in Life	DCI.LS1.C.6-8.5	Within individual organisms, food moves through a series of chemical reactions in which it is broken down and rearranged to form new molecules, to support growth, or to release energy.
A	1	Organisms	14	Molecules in Life	DCI.LS3.A.6-8.4	Genes are located in the chromosomes of cells, with each chromosome pair containing two variants of each of many distinct genes. Each distinct gene chiefly controls the production of specific proteins, which in turn affects the traits of the individual. Changes (mutations) to genes can result in changes to proteins, which can affect the structures and functions of the organism and thereby change traits.
A	1	Organisms	15	Single-Celled Organisms	DCI.LS1.A.6-8.3	All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).
A	1	Organisms	15	Single-Celled Organisms	MS-LS1-1	Conduct an investigation to provide evidence that living things are made of cells, either one cell or many different numbers and types of cells.
A	1	Organisms	16	Multicellular Organisms	DCI.LS1.A.6-8.3	All living things are made up of cells, which is the smallest unit that can be said to be alive. An organism may consist of one single cell (unicellular) or many different numbers and types of cells (multicellular).
A	1	Organisms	16	Multicellular Organisms	DCI.LS1.A.6-8.5	In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions.
A	1	Organisms	16	Multicellular Organisms	MS-LS1-1	Conduct an investigation to provide evidence that living things are made of cells, either one cell or many different numbers and types of cells.

A	5	Animals and Species	11	Continuation of Species	DCI.LS1.B.6-8.3	Animals engage in characteristic behaviors that increase the odds of reproduction.
A	5	Animals and Species	11	Continuation of Species	DCI.LS1.B.6-8.6	Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring.
A	5	Animals and Species	11	Continuation of Species	DCI.LS3.B.6-8.4	In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. Individuals have two of each chromosome and hence two alleles of each gene, one acquired from each parent. These versions may be identical or may differ from each other.
A	5	Animals and Species	11	Continuation of Species	MS-LS1-4	Use argument based on empirical evidence and scientific reasoning to support an explanation for how characteristic animal behaviors and specialized plant structures affect the probability of successful reproduction of animals and plants respectively.
A	5	Animals and Species	11	Continuation of Species	MS-LS3-2	Develop and use a model to describe why asexual reproduction results in offspring with identical genetic information and sexual reproduction results in offspring with genetic variation.
A	5	Animals and Species	12	Cells for Reproduction	DCI.LS1.B.6-8.4	Plants reproduce in a variety of ways, sometimes depending on animal behavior and specialized features for reproduction.
A	5	Animals and Species	12	Cells for Reproduction	DCI.LS1.B.6-8.6	Organisms reproduce, either sexually or asexually, and transfer their genetic information to their offspring.
A	5	Animals and Species	12	Cells for Reproduction	DCI.LS3.B.6-8.4	In sexually reproducing organisms, each parent contributes half of the genes acquired (at random) by the offspring. A	5	Animals and Species	19	Unit Test	Multiple	All assessed standards covered in this unit
B	1	Interdependence of Life	1	Organisms and Their Needs	DCI.LS1.C.6-8.4	Plants, algae (including phytoplankton), and many microorganisms use the energy from light to make sugars (food) from carbon dioxide from the atmosphere and water through the process of photosynthesis, which also releases oxygen. These sugars can be used immediately or stored for growth or later use.
B	1	Interdependence of Life	1	Organisms and Their Needs	DCI.LS2.A.6-8.4	Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.
B	1	Interdependence of Life	1	Organisms and Their Needs	DCI.LS2.A.6-8.5	In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction.
B	1	Interdependence of Life	1	Organisms and Their Needs	MS-ETS1-2	Evaluate competing design solutions using a systematic process to determine how well they meet the criteria and constraints of the problem.
B	1	Interdependence of Life	1	Organisms and Their Needs	MS-ETS1-3	Analyze data from tests to determine similarities and differences among several design solutions to identify the best characteristics of each that can be combined into a new solution to better meet the criteria for success.
B	1	Interdependence of Life	1	Organisms and Their Needs	MS-LS1-5	Construct a scientific explanation based on evidence for how environmental and genetic factors influence the growth of organisms.
B	1	Interdependence of Life	1	Organisms and Their Needs	MS-LS2-1	Analyze and interpret data to provide evidence for the effects of resource availability on organisms and populations of organisms in an ecosystem.
B	1	Interdependence of Life	1	Organisms and Their Needs	MS-LS2-4	Construct an argument supported by empirical evidence that changes to physical or biological components of an ecosystem affect populations.
B	1	Interdependence of Life	2	Staying Balanced	DCI.LS1.A.6-8.5	In multicellular organisms, the body is a system of multiple interacting subsystems. These subsystems are groups of cells that work together to form tissues and organs that are specialized for particular body functions.
B	1	Interdependence of Life	3	Responses	DCI.LS1.D.6-8.3	Each sense receptor responds to different inputs (electromagnetic, mechanical, chemical), transmitting them as signals that travel along nerve cells to the brain. The signals are then processed in the brain, resulting in immediate behaviors or memories.
B	1	Interdependence of Life	3	Responses	MS-LS1-8	Gather and synthesize information that sensory receptors respond to stimuli by sending messages to the brain for immediate behavior or storage as memories.
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.A.6-8.4	Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.

Attachment 28 - ACAD						
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.A.6-8.5	In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction.
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.A.6-8.6	Growth of organisms and population increases are limited by access to resources.
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.A.6-8.7	Similarly, predatory interactions may reduce the number of organisms or eliminate whole populations of organisms. Mutually beneficial interactions, in contrast, may become so interdependent that each organism requires the other for survival. Although the species involved in these competitive, predatory, and mutually beneficial interactions vary across ecosystems, the patterns of interactions of organisms with their environments, both living and nonliving, are shared.
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.B.6-8.2	Food webs are models that demonstrate how matter and energy is transferred between producers, consumers, and decomposers as the three groups interact within an ecosystem. Transfers of matter into and out of the physical environment occur at every level. Decomposers recycle nutrients from dead plant or animal matter back to the soil in terrestrial environments or to the water in aquatic environments. The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.
B	1	Interdependence of Life	4	Ecosystems	DCI.LS2.C.6-8.2	Ecosystems are dynamic in nature; their characteristics can vary over time. Disruptions to any physical or biological component of an ecosystem can lead to shifts in all its populations.
B	1	Interdependence of Life	5	Population Limits	DCI.LS2.A.6-8.4	Organisms, and populations of organisms, are dependent on their environmental interactions both with other living things and with nonliving factors.
B	1	Interdependence of Life	5	Population Limits	DCI.LS2.A.6-8.5	In any ecosystem, organisms and populations with similar requirements for food, water, oxygen, or other resources may compete with each other for limited resources, access to which consequently constrains their growth and reproduction.
B	1	Interdependence of Life	5	Population Limits	DCI.LS2.A.6-8.6	Growth of organisms and population increases are limited by access to resources.

The atoms that make up the organisms in an ecosystem are cycled repeatedly between the living and nonliving parts of the ecosystem.
B	1	Interdependence of Life	7	Cycles in Nature	DCI.PS3.D.6-8.1	The chemical reaction by which plants produce complex food molecules (sugars) requires an energy input (i.e., from sunlight) to occur. In this reaction, carbon dioxide and water combine to form carbon-based organic molecules and release oxygen.
B	1	Interdependence of Life	7	Cycles in Nature	DCI.PS3.D.6-8.2	Cellular respiration in plants and animals involve chemical reactions with oxygen that release stored energy. In these processes, complex molecules containing carbon react with oxygen to produce carbon dioxide and other materials.
B	1	Interdependence of Life	7	Cycles in Nature	MS-ETS1-4	Develop a model to generate data for iterative testing and modification of a proposed object, tool, or process such that an optimal design can be achieved.
B	1	Interdependence of Life	7	Cycles in Nature	MS-LS2-3	Develop a model to describe the cycling of matter and flow of energy among living and nonliving parts of an ecosystem.

A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.5.1	Science is both a body of knowledge and the processes and practices used to add to that body of knowledge.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.5.2	Science knowledge is cumulative and many people, from many generations and nations, have contributed to science knowledge.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.5.3	Science is a way of knowing used by many people, not just scientists.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.7.1	Men and women from different social, cultural, and ethnic backgrounds work as scientists and engineers.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.7.2	Scientists and engineers rely on human qualities such as persistence, precision, reasoning, logic, imagination and creativity.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.7.3	Scientists and engineers are guided by habits of mind such as intellectual honesty, tolerance of ambiguity, skepticism and openness to new ideas.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.7.4	Advances in technology influence the progress of science and science has influenced advances in technology.
A	1	Intro to Physical Science	1	Introduction to Science	6-8.AH.8.1	Scientific knowledge is constrained by human capacity, technology, and materials.
A	1	Intro to Physical Science	1	Introduction to Science	CCC.10.6-8.3	Scientific knowledge can describe the consequences of actions but does not necessarily prescribe the decisions that society takes.
A	1	Intro to Physical Science	2	Intro to Physical Science	6-8.AG.5.2	Within a natural or designed system, the transfer of energy drives the motion and/or cycling of matter.
A	1	Intro to Physical Science	3	Matter and Energy	6-8.AF.6.6	Apply scientific ideas or principles to design, construct, and/or test a design of an object, tool, process or system.
A	1	Intro to Physical Science	3	Matter and Energy	CCC.6.6-8.3	Structures can be designed to serve particular functions.
A	1	Intro to Physical Science	3	Matter and Energy	DCI.PS3.B.6-8.3	Energy is spontaneously transferred out of hotter regions or objects and into colder ones.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AF.6.6	Apply scientific ideas or principles to design, construct, and/or test a design of an object, tool, process or system.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.4.1	Theories are explanations for observable phenomena.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.4.2	Science theories are based on a body of evidence developed over time.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.4.3	Laws are regularities or mathematical descriptions of natural phenomena.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.4.4	A hypothesis is used by scientists as an idea that may contribute important new knowledge for the evaluation of a scientific theory.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.4.5	The term "theory" as used in science is very different from the common use outside of science.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.5.1	Science is both a body of knowledge and the processes and practices used to add to that body of knowledge.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.7.4	Advances in technology influence the progress of science and science has influenced advances in technology.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AH.8.1	Scientific knowledge is constrained by human capacity, technology, and materials.
A	1	Intro to Physical Science	4	Science and Engineering	6-8.AJ.1.2	Science and technology drive each other forward.
A	1	Intro to Physical Science	4	Science and Engineering	CCC.12.6-8.3	Advances in technology influence the progress of science and science has influenced advances in technology.
A	1	Intro to Physical Science	4	Science and Engineering	CCC.6.6-8.3	Structures can be designed to serve particular functions.
A	1	Intro to Physical Science	4	Science and Engineering	CCC.8.6-8.10	The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions.

Attachment 28 - ACAD					
A	1	Intro to Physical Science	4	Science and Engineering	CCC.8.6-8.11 Technologies extend the measurement, exploration, modeling, and computational capacity of scientific investigations.
A	1	Intro to Physical Science	4	Science and Engineering	CCC.8.6-8.9 The uses of technologies and any limitations on their use are driven by individual or societal needs, desires, and values; by the findings of scientific research; and by differences in such factors as climate, natural resources, and economic conditions. Thus technology use varies from region to region and over time.
A	1	Intro to Physical Science	4	Science and Engineering	CCC.9.6-8.4 Engineering advances have led to important discoveries in virtually every field of science, and scientific discoveries have led to the development of entire industries and engineered systems.
A	1	Intro to Physical Science	4	Science and Engineering	DCI.ETS1.B.6-8.10 Models of all kinds are important for testing solutions.
A	1	Intro to Physical Science	4	Science and Engineering	DCI.ETS1.B.6-8.6 A solution needs to be tested, and then modified on the basis of the test results, in order to improve it.
A	1	Intro to Physical Science	4	Science and Engineering	DCI.ETS1.B.6-8.7 A solution needs to be tested, and then modified on the basis of the test results in order to improve it. There are systematic processes for evaluating solutions with respect to how well they meet criteria and constraints of a problem.
A	1	Intro to Physical Science	4	Science and Engineering	DCI.ETS1.C.6-8.3 Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process—that is, some of the characteristics may be incorporated into the new design.
A	1	Intro to Physical Science	4	Science and Engineering	DCI.ETS1.C.6-8.4 The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution.
A	1	Intro to Physical Science	4	Science and Engineering	SEP.11.3 Laws are regularities or mathematical descriptions of natural phenomena.
A	1	Intro to Physical Science	4	Science and Engineering	SEP.7.6-8.2 Conduct an investigation and evaluate the experimental design to produce data to serve as the basis for evidence that can meet the goals of the investigation.
A	1	Intro to Physical Science	4	Science and Engineering	SEP.9.3 Science knowledge is based upon logical and conceptual connections between evidence and explanations.
A	1	Intro to Physical Science	5	Physical Systems and Models	6-8.AG.3.1 Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.
A	1	Intro to Physical Science	5	Physical Systems and Models	6-8.AG.4.1 Systems may interact with other systems; they may have sub-systems and be a part of larger complex systems.
A	1	Intro to Physical Science	5	Physical Systems and Models	6-8.AG.4.3 Models are limited in that they only represent certain aspects of the system under study.
A	1	Intro to Physical Science	5	Physical Systems and Models	6-8.AH.3.1 Scientific explanations are subject to revision and improvement in light of new evidence.
A	1	Intro to Physical Science	5	Physical Systems and Models	6-8.AH.3.3 Science findings are frequently revised and/or reinterpreted based on new evidence.
A	1	Intro to Physical Science	5	Physical Systems and Models	CCC.3.6-8.5 Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.
A	1	Intro to Physical Science	5	Physical Systems and Models	DCI.ETS1.B.6-8.10 Models of all kinds are important for testing solutions.
A	1	Intro to Physical Science	6	Measurement and Units	6-8.AH.1.1 Science investigations use a variety of methods and tools to make measurements and observations.
A	1	Intro to Physical Science	6	Measurement and Units	DCI.PS2.A.6-8.3 All positions of objects and the directions of forces and motions must be described in an arbitrarily chosen reference frame and arbitrarily chosen units of size. In order to share information with other people, these choices must also be shared.

A	1	Intro to Physical Science	7	Experimentation	6-8.AF.3.1 Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.
A	1	Intro to Physical Science	7	Experimentation	6-8.AF.4.6 Consider limitations of data analysis (e.g., measurement error), and/or seek to improve precision and accuracy of data with better technological tools and methods (e.g., multiple trials).
A	1	Intro to Physical Science	7	Experimentation	6-8.AH.1.1 Science investigations use a variety of methods and tools to make measurements and observations.
A	1	Intro to Physical Science	7	Experimentation	SEP.2.6-8.1 Ask questions that can be investigated within the scope of the classroom, outdoor environment, and museums and other public facilities with available resources and, when appropriate, frame a hypothesis based on observations and scientific principles.
A	1	Intro to Physical Science	8	Data Collection	6-8.AF.3.1 Plan an investigation individually and collaboratively, and in the design: identify independent and dependent variables and controls, what tools are needed to do the gathering, how measurements will be recorded, and how many data are needed to support a claim.
A	1	Intro to Physical Science	8	Data Collection	6-8.AF.4.1 Construct, analyze, and/or interpret graphical displays of data and/or large data sets to identify linear and nonlinear relationships.
A	1	Intro to Physical Science	8	Data Collection	6-8.AF.4.6 Consider limitations of data analysis (e.g., measurement error), and/or seek to improve precision and accuracy of data with better technological tools and methods (e.g., multiple trials).
A	1	Intro to Physical Science	8	Data Collection	CCC.1.6-8.11 Graphs and charts can be used to identify patterns in data.
A	1	Intro to Physical Science	8	Data Collection	SEP.1.6-8.1 Analyze and interpret data to determine similarities and differences in findings.
A	1	Intro to Physical Science	8	Data Collection	SEP.1.6-8.2 Construct and interpret graphical displays of data to identify linear and nonlinear relationships.

B	2	Energy	1	Energy	CCC.5.6-8.6	Energy may take different forms (e.g. energy in fields, thermal energy, energy of motion).
B	2	Energy	1	Energy	DCI.PS3.A.6-8.3	Motion energy is properly called kinetic energy; it is proportional to the mass of the moving object and grows with the square of its speed.
B	2	Energy	1	Energy	DCI.PS3.A.6-8.4	A system of objects may also contain stored (potential) energy, depending on their relative positions.
B	2	Energy	1	Energy	DCI.PS3.B.6-8.3	Energy is spontaneously transferred out of hotter regions or objects and into colder ones.
B	2	Energy	2	Thermal Energy	CCC.5.6-8.6	Energy may take different forms (e.g. energy in fields, thermal energy, energy of motion).
B	2	Energy	2	Thermal Energy	DCI.PS3.A.6-8.1	The term "heat" as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. In science, heat is used only for this second meaning; it refers to the energy transferred due to the temperature difference between two objects.
B	2	Energy	2	Thermal Energy	DCI.PS3.A.6-8.2	The temperature of a system is proportional to the average internal kinetic energy and potential energy per atom or molecule (whichever is the appropriate building block for the system's material). The details of that relationship depend on the type of atom or molecule and the interactions among the atoms in the material. Temperature is not a direct measure of a system's total thermal energy. The total thermal energy (sometimes called the total internal energy) of a system depends jointly on the temperature, the total number of atoms in the system, and the state of the material.
B	2	Energy	2	Thermal Energy	DCI.PS3.A.6-8.5	Temperature is a measure of the average kinetic energy of particles of matter. The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.
B	2	Energy	2	Thermal Energy	DCI.PS3.B.6-8.2	The amount of energy transfer needed to change the temperature of a matter sample by a given amount depends on the nature of the matter, the size of the sample, and the environment.
B	2	Energy	2	Thermal Energy	DCI.PS3.B.6-8.3	Energy is spontaneously transferred out of hotter regions or objects and into colder ones.
B	2	Energy	2	Thermal Energy	MS-PS1-4	Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.
B	2	Energy	3	Temperature and Heat	CCC.3.6-8.5	Time, space, and energy phenomena can be observed at various scales using models to study systems that are too large or too small.
B	2	Energy	3	Temperature and Heat	DCI.PS1.A.6-8.6	The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.

B	2	Energy	3	Temperature and Heat	DCI.PS3.A.6-8.5 Temperature is a measure of the average kinetic energy of particles of matter. The relationship between the temperature and the total energy of a system depends on the types, states, and amounts of matter present.
B	2	Energy	3	Temperature and Heat	DCI.PS3.B.6-8.2 The amount of energy transfer needed to change the temperature of a matter sample by a given amount depends on the nature of the matter, the size of the sample, and the environment.
B	2	Energy	3	Temperature and Heat	DCI.PS3.B.6-8.3 Energy is spontaneously transferred out of hotter regions or objects and into colder ones.
B	2	Energy	3	Temperature and Heat	MS-PS1-4 Develop a model that predicts and describes changes in particle motion, temperature, and state of a pure substance when thermal energy is added or removed.
B	2	Energy	3	Temperature and Heat	MS-PS3-4 Plan an investigation to determine the relationships among the energy transferred, the type of matter, the mass, and the change in the average kinetic energy of the particles as measured by the temperature of the sample.
B	2	Energy	4	Particle Motion	DCI.PS1.A.6-8.6 The changes of state that occur with variations in temperature or pressure can be described and predicted using these models of matter.
B	2	Energy	4	Particle Motion	DCI.PS3.A.6-8.1 The term "heat" as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AF.6.6	Apply scientific ideas or principles to design, construct, and/or test a design of an object, tool, process or system.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AF.6.7	Undertake a design project, engaging in the design cycle, to construct and/or implement a solution that meets specific design criteria and constraints.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AF.6.8	Optimize performance of a design by prioritizing criteria, making tradeoffs, testing, revising, and re-testing.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AF.7.2	Respectfully provide and receive critiques about one's explanations, procedures, models, and questions by citing relevant evidence and posing and responding to questions that elicit pertinent elaboration and detail.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AF.7.4	Make an oral or written argument that supports or refutes the advertised performance of a device, process, or system based on empirical evidence concerning whether or not the technology meets relevant criteria and constraints.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AG.5.4	The transfer of energy can be tracked as energy flows through a designed or natural system.
B	2	Energy	5	Laboratory: Design a Thermos 1	6-8.AG.6.2	Structures can be designed to serve particular functions by taking into account properties of different materials, and how materials can be shaped and used.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.ETS1.A.6-8.4	The more precisely a design task's criteria and constraints can be defined, the more likely it is that the designed solution will be successful. Specification of constraints includes consideration of scientific principles and other relevant knowledge that is likely to limit possible solutions.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.ETS1.B.6-8.6	A solution needs to be tested, and then modified on the basis of the test results, in order to improve it.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.ETS1.B.6-8.9	Sometimes parts of different solutions can be combined to create a solution that is better than any of its predecessors.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.ETS1.C.6-8.3	Although one design may not perform the best across all tests, identifying the characteristics of the design that performed the best in each test can provide useful information for the redesign process—that is, some of the characteristics may be incorporated into the new design.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.ETS1.C.6-8.4	The iterative process of testing the most promising solutions and modifying what is proposed on the basis of the test results leads to greater refinement and ultimately to an optimal solution.
B	2	Energy	5	Laboratory: Design a Thermos 1	DCI.PS3.A.6-8.1	The term "heat" as used in everyday language refers both to thermal energy (the motion of atoms or molecules within a substance) and the transfer of that thermal energy from one object to another. B	3	Cycles on Earth	7	Water Cycle	DCI.ESS2.C.9-12.8	The abundance of liquid water on Earth's surface and its unique combination of physical and chemical properties are central to the planet's dynamics. These properties include water's exceptional capacity to absorb, store, and release large amounts of energy, transmit sunlight, expand upon freezing, dissolve and transport materials, and lower the viscosities and melting points of rocks.
B	3	Cycles on Earth	7	Water Cycle	HS-ESS2-5	Plan and conduct an investigation of the properties of water and its effects on Earth materials and surface processes.
B	3	Cycles on Earth	8	How Humans Alter Cycles	DCI.ESS2.D.9-12.7	Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen.
B	3	Cycles on Earth	8	How Humans Alter Cycles	DCI.ESS2.D.9-12.8	Changes in the atmosphere due to human activity have increased carbon dioxide concentrations and thus affect climate.
B	3	Cycles on Earth	8	How Humans Alter Cycles	DCI.ESS3.B.9-12.5	Natural hazards and other geologic events have shaped the course of human history; [they] have significantly altered the sizes of human populations and have driven human migrations.
B	3	Cycles on Earth	8	How Humans Alter Cycles	DCI.LS2.C.9-12.5	Moreover, anthropogenic changes (induced by human activity) in the environment—including habitat destruction, pollution, introduction of invasive species, overexploitation, and climate change—can disrupt an ecosystem and threaten the survival of some species.
B	3	Cycles on Earth	8	How Humans Alter Cycles	HS-ESS3-6	Use a computational representation to illustrate the relationships among Earth systems and how those relationships are being modified due to human activity.

B	5	Earth's Resources	14	Population Changes	DCI.LS2.A.9-12.8	Ecosystems have carrying capacities, which are limits to the numbers of organisms and populations they can support. These limits result from such factors as the availability of living and nonliving resources and from such challenges such as predation, competition, and disease. Organisms would have the capacity to produce populations of great size were it not for the fact that environments and resources are finite. This fundamental tension affects the abundance (number of individuals) of species in any given ecosystem.

A	1	The Science of Biology	1	Semester Introduction	9-12.AH.5.1	Science is both a body of knowledge that represents a current understanding of natural systems and the processes used to refine, elaborate, revise, and extend this knowledge.
A	1	The Science of Biology	2	Biology and Scientific Methods	9-12.AH.5.1	Science is both a body of knowledge that represents a current understanding of natural systems and the processes used to refine, elaborate, revise, and extend this knowledge.
A	1	The Science of Biology	2	Biology and Scientific Methods	9-12.AH.5.3	Science distinguishes itself from other ways of knowing through use of empirical standards, logical arguments, and skeptical review.
A	1	The Science of Biology	2	Biology and Scientific Methods	9-12.AH.5.4	Science knowledge has a history that includes the refinement of, and changes to, theories, ideas, and beliefs over time.
A	1	The Science of Biology	2	Biology and Scientific Methods	9-12.AH.8.1	Not all questions can be answered by science.
A	1	The Science of Biology	2	Biology and Scientific Methods	9-12.AH.8.3	Science knowledge indicates what can happen in natural systems—not what should happen. The latter involves ethics, values, and human decisions about the use of knowledge.
A	1	The Science of Biology	2	Biology and Scientific Methods	SEP.10.2	Most scientific knowledge is quite durable, but is, in principle, subject to change based on new evidence and/or reinterpretation of existing evidence.
A	1	The Science of Biology	3	Scientific Processes 1	9-12.AF.1.2	Evaluate a question to determine if it is testable and relevant. Ask questions that can be investigated within the scope of the school laboratory, research facilities, or field (e.g., outdoor environment) with available resources and, when appropriate, frame a hypothesis based on a model or theory. Ask and/or evaluate questions that challenge the premise(s) of an argument, the interpretation of a data set, or the suitability of a design. Define a design problem that involves the development of a process or system with interacting components and criteria and constraints that may include social, technical, and/or environmental considerations.
A	1	The Science of Biology	3	Scientific Processes 1	9-12.AH.4.5	Scientists often use hypotheses to develop and test theories and explanations.

A	4	Mendelian Genetics	8	Chromosomes and Genes	DCI.LS1.B.9-12.7	In multicellular organisms individual cells grow and then divide via a process called mitosis, thereby allowing the organism to grow. The organism begins as a single cell (fertilized egg) that divides successively to produce many cells, with each parent cell passing identical genetic material (two variants of each chromosome pair) to both daughter cells. Cellular division and differentiation produce and maintain a complex organism, composed of systems of tissues and organs that work together to meet the needs of the whole organism.

B	2	Evolution	1	Evolution and Biology	CCC.7.9-12.6	Much of science deals with constructing explanations of how things change and how they remain stable.
B	2	Evolution	1	Evolution and Biology	DCI.LS4.B.9-12.4	Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation—that leads to differences in performance among individuals.
B	2	Evolution	1	Evolution and Biology	DCI.LS4.C.9-12.3	Evolution is a consequence of the interaction of four factors: (1) the potential for a species to increase in number, (2) the genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for an environment's limited supply of the resources that individuals need in order to survive and reproduce, and (4) the ensuing proliferation of those organisms that are better able to survive and reproduce in that environment.
B	2	Evolution	1	Evolution and Biology	DCI.LS4.C.9-12.5	Adaptation also means that the distribution of traits in a population can change when conditions change.
B	2	Evolution	1	Evolution and Biology	HS-LS4-2	Construct an explanation based on evidence that the process of evolution primarily results from four factors: (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.
B	2	Evolution	1	Evolution and Biology	HS-LS4-4	Construct an explanation based on evidence for how natural selection leads to adaptation of populations.
B	2	Evolution	2	Evolution and Populations	DCI.LS4.A.9-12.6	Genetic information provides evidence of evolution. DNA sequences vary among species, but there are many overlaps; in fact, the ongoing branching that produces multiple lines of descent can be inferred by comparing the DNA sequences of different organisms. Such information is also derivable from the similarities and differences in amino acid sequences and from anatomical and embryological evidence.
B	2	Evolution	2	Evolution and Populations	DCI.LS4.B.9-12.4	Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation—that leads to differences in performance among individuals.
B	2	Evolution	2	Evolution and Populations	DCI.LS4.C.9-12.3	Evolution is a consequence of the interaction of four factors: (1) the potential for a species to increase in number, (2) the genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for an environment's limited supply of the resources that individuals need in order to survive and reproduce, and (4) the ensuing proliferation of those organisms that are better able to survive and reproduce in that environment.

Attachment 28 - ACAD					
B	2	Evolution	2	Evolution and Populations	DCI.LS4.C.9-12.4 Natural selection leads to adaptation, that is, to a population dominated by organisms that are anatomically, behaviorally, and physiologically well suited to survive and reproduce in a specific environment. That is, the differential survival and reproduction of organisms in a population that have an advantageous heritable trait leads to an increase in the proportion of individuals in future generations that have the trait and to a decrease in the proportion of individuals that do not.
B	2	Evolution	2	Evolution and Populations	HS-LS2-2 Use mathematical representations to support and revise explanations based on evidence about factors affecting biodiversity and populations in ecosystems of different scales.
B	2	Evolution	2	Evolution and Populations	HS-LS2-6 Evaluate the claims, evidence, and reasoning that the complex interactions in ecosystems maintain relatively consistent numbers and types of organisms in stable conditions, but changing conditions may result in a new ecosystem.
B	2	Evolution	2	Evolution and Populations	HS-LS4-2 Construct an explanation based on evidence that the process of evolution primarily results from four factors: (1) the potential for a species to increase in number, (2) the heritable genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for limited resources, and (4) the proliferation of those organisms that are better able to survive and reproduce in the environment.
B	2	Evolution	3	Variation in Populations	DCI.LS3.B.9-12.6 In sexual reproduction, chromosomes can sometimes swap sections during the process of meiosis (cell division), thereby creating new genetic combinations and thus more genetic variation. Although DNA replication is tightly regulated and remarkably accurate, errors do occur and result in mutations, which are also a source of genetic variation. Environmental factors can also cause mutations in genes, and viable mutations are inherited.
B	2	Evolution	3	Variation in Populations	DCI.LS3.B.9-12.7 Environmental factors also affect expression of traits, and hence affect the probability of occurrences of traits in a population. Thus the variation and distribution of traits observed depends on both genetic and environmental factors.
B	2	Evolution	3	Variation in Populations	DCI.LS4.B.9-12.4 Natural selection occurs only if there is both (1) variation in the genetic information between organisms in a population and (2) variation in the expression of that genetic information—that is, trait variation—that leads to differences in performance among individuals.
B	2	Evolution	3	Variation in Populations	DCI.LS4.C.9-12.3 Evolution is a consequence of the interaction of four factors: (1) the potential for a species to increase in number, (2) the genetic variation of individuals in a species due to mutation and sexual reproduction, (3) competition for an environment's limited supply of the resources that individuals need in order to survive and reproduce, and (4) the ensuing proliferation of those organisms that are better able to survive and reproduce in that environment.
B	2	Evolution	3	Variation in Populations	HS-LS3-2 Make and defend a claim based on evidence that inheritable genetic variations may result from: (1) new genetic combinations through meiosis, (2) viable errors occurring during replication, and/or (3) mutations caused by environmental factors.

B	5	Ecology and the Environment	10	Succession	HS-LS4-5	Evaluate the evidence supporting claims that changes in environmental conditions may result in: (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.
B	5	Ecology and the Environment	11	Laboratory: Patterns of Succession 1	HS-LS4-5	Evaluate the evidence supporting claims that changes in environmental conditions may result in: (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.
B	5	Ecology and the Environment	12	Laboratory: Patterns of Succession 2	HS-LS4-5	Evaluate the evidence supporting claims that changes in environmental conditions may result in: (1) increases in the number of individuals of some species, (2) the emergence of new species over time, and (3) the extinction of other species.
B	5	Ecology and the Environment	13	Changes in Ecosystems	DCI.LS2.C.9-12.5	Moreover, anthropogenic changes (induced by human activity) in the environment—including habitat destruction, pollution, introduction of invasive species, overexploitation, and climate change—can disrupt an ecosystem and threaten the survival of some species.
B	5	Ecology and the Environment	13	Changes in Ecosystems	DCI.LS4.D.9-12.5	Humans depend on the living world for the resources and other benefits provided by biodiversity. But human activity is also having adverse impacts on biodiversity through overpopulation, overexploitation, habitat destruction, pollution, introduction of invasive species, and climate change. Thus sustaining biodiversity so that ecosystem functioning and productivity are maintained is essential to supporting and enhancing life on Earth. Sustaining biodiversity also aids humanity by preserving landscapes of recreational or inspirational value.

B	6	Semester Review and Test	1	Semester Review	DCI.ESS2.D.9-12.7	Gradual atmospheric changes were due to plants and other organisms that captured carbon dioxide and released oxygen.
B	6	Semester Review and Test	1	Semester Review	DCI.LS2.B.9-12.4	Plants or algae form the lowest level of the food web. At each link upward in a food web, only a small fraction of the matter consumed at the lower level is transferred upward, to produce growth and release energy in cellular respiration at the higher level. Given this inefficiency, there are generally fewer organisms at higher levels of a food web. Some matter reacts to release energy for life functions, some matter is stored in newly made structures, and much is discarded. The chemical elements that make up the molecules of organisms pass through food webs and into and out of the atmosphere and soil, and they are combined and recombined in different ways. At each link in an ecosystem, matter and energy are conserved.
B	6	Semester Review and Test	1	Semester Review	DCI.LS2.B.9-12.5	Photosynthesis and cellular respiration are important components of the carbon cycle, in which carbon is exchanged among the biosphere, atmosphere, oceans, and geosphere through chemical, physical, geological, and biological processes.
B	6	Semester Review and Test	1	Semester Review	DCI.LS4.A.9-12.6	Genetic information provides evidence of evolution. DNA sequences vary among species, but there are many overlaps; in fact, the ongoing branching that produces multiple lines of descent can be inferred by comparing the DNA sequences of different organisms. Such information is also derivable from the similarities and differences in amino acid sequences and from anatomical and embryological evidence.
B	6	Semester Review and Test	1	Semester Review	DCI.PS3.D.9-12.3	The main way that solar energy is captured and stored on Earth is through the complex chemical process known as photosynthesis.

B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	CCC.5.9-10.12	Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	CCC.5.9-10.13	Energy cannot be created or destroyed—it only moves between one place and another place, between objects and/or fields, or between systems.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	DCI.PS3.A.9-12.3	At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	DCI.PS3.B.9-12.1	Conservation of energy means that the total change of energy in any system is always equal to the total energy transferred into or out of the system.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	DCI.PS3.B.9-12.2	Energy cannot be created or destroyed, but it can be transported from one place to another and transferred between systems.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	DCI.PS3.B.9-12.3	Mathematical expressions, which quantify how the stored energy in a system depends on its configuration (e.g. relative positions of charged particles, compression of a spring) and how kinetic energy depends on mass and speed, allow the concept of conservation of energy to be used to predict and describe system behavior.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	HS-PS1-4	Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	HS-PS1-5	Apply scientific principles and evidence to provide an explanation about the effects of changing the temperature or concentration of the reacting particles on the rate at which a reaction occurs.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	HS-PS1-6	Refine the design of a chemical system by specifying a change in conditions that would produce increased amounts of products at equilibrium.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	HS-PS1-7	Use mathematical representations to support the claim that atoms, and therefore mass, are conserved during a chemical reaction.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	HS-PS3-2	Develop and use models to illustrate that energy at the macroscopic scale can be accounted for as either motions of particles or energy stored in fields.
B	4	Chemical Thermodynamics	2	Measuring the Flow of Heat	SEP.4.9-12.1	Develop a model to illustrate that the release or absorption of energy from a chemical reaction system depends upon the changes in total bond energy.
B	4	Chemical Thermodynamics	3	Laboratory: Heat Transfer 1	CCC.1.9-12.15	Different patterns may be observed at each of the scales at which a system is studied and can provide evidence for causality in explanations of phenomena.
B	4	Chemical Thermodynamics	3	Laboratory: Heat Transfer 1	CCC.5.9-10.12	Changes of energy and matter in a system can be described in terms of energy and matter flows into, out of, and within that system.
B	4	Chemical Thermodynamics	3	Laboratory: Heat Transfer 1	CCC.5.9-10.13	Energy cannot be created or destroyed—it only moves between one place and another place, between objects and/or fields, or between systems.
B	4	Chemical Thermodynamics	3	Laboratory: Heat Transfer 1	DCI.PS1.B.9-12.1	Chemical processes, their rates, and whether or not energy is stored or released can be understood in terms of the collisions of molecules and the rearrangements of atoms into new molecules, with consequent changes in the sum of all bond energies in the set of molecules that are matched by changes in kinetic energy.
B	4	Chemical Thermodynamics	3	Laboratory: Heat Transfer 1	DCI.PS3.A.9-12.2	Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms.

B	3	Energy	1	Types of Energy and Their Conversions	CCC.5.9-10.13	Energy cannot be created or destroyed—it only moves between one place and another place, between objects and/or fields, or between systems.
B	3	Energy	1	Types of Energy and Their Conversions	DCI.PS3.A.9-12.1	...and "electrical energy" may mean energy stored in a battery or energy transmitted by electric currents.
B	3	Energy	1	Types of Energy and Their Conversions	DCI.PS3.A.9-12.2	Energy is a quantitative property of a system that depends on the motion and interactions of matter and radiation within that system. That there is a single quantity called energy is due to the fact that a system's total energy is conserved, even as, within the system, energy is continually transferred from one object to another and between its various possible forms.
B	3	Energy	1	Types of Energy and Their Conversions	DCI.PS3.A.9-12.3	At the macroscopic scale, energy manifests itself in multiple ways, such as in motion, sound, light, and thermal energy.
B	3	Energy	1	Types of Energy and Their Conversions	DCI.PS3.A.9-12.4	These relationships are better understood at the microscopic scale, at which all of the different manifestations of energy can be modeled as a combination of energy associated with the motion of particles and energy associated with the configuration (relative position of the particles). In some cases the relative position energy can be thought of as stored in fields (which mediate interactions between particles). This last concept includes radiation, a phenomenon in which energy stored in fields moves across space.
B	3	Energy	1	Types of Energy and Their Conversions	DCI.PS3.B.9-12.1	Conservation of energy means that the total change of energy in any system is always equal to the total energy transferred into or out of the system.

<p>K & 1 Phonics Instruction</p>	<p style="text-align: center;">Attachment 28 - ACAD</p> <p>Phonics prepares students to become independent readers through teacher-led, systematic, multisensory instruction in a developmentally appropriate manner. Students review phonological awareness and learn advanced decoding skills and sight words. Letter tiles, a variety of interactive games and activities, and decodable readers (brief stories that consist entirely of words students can read independently) support multimodal learning.</p> <p>Spelling instruction begins in the second half of the first semester in ELA 1, building on the foundation of letter-sound knowledge previously mastered in Phonics.</p>
<p>Kindergarten ELA</p>	<p>This program provides kindergarten students with a complete early literacy learning experience. Students work through structured lessons that emphasize reading readiness, phonics, language skills, literature, writing skills, and handwriting through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice, both online and offline. The program provides a strong foundation in comprehension and vocabulary to instill a lifelong interest in reading and learning.</p>
<p>First Grade ELA</p>	<p>The first grade program provides continues to integrate phonics, reading, writing, grammar, vocabulary, spelling, and handwriting. Students develop comprehension, build vocabulary, and gain a lifelong interest in reading. Thematic units in literacy contain workshops in which instruction is anchored by a focus text. Through a combination of teacher-led instruction (either live or via embedded video within the course) and independent practice (both online and offline), students build knowledge by exploring both classic and contemporary works in different genres and formats—fiction, poetry, drama, nonfiction, trade books, magazines, and e-books.</p> <p>Beginning in the second semester, students complete focused grammar activities and write a variety of compositions by following the writing process.</p>

Grade Band K-3	<p>Second Grade ELA</p>	<p style="text-align: center;">Attachment 28 - ACAD</p> <p>This second grade course provides a well-balanced approach to literacy that connects reading, writing, grammar, word study (including vocabulary and spelling), and handwriting into one integrated program. Each thematic unit contains workshops in which reading, writing, and word study are anchored by a focus text. Through read-aloud videos, independent reading, and close reading activities, students explore both classic and contemporary works in different genres and formats—fiction, poetry, drama, nonfiction, and magazines. Through studying model writing from the reading selections, students use the writing process to complete a variety of short and long compositions. Students learn about grammar, usage, and mechanics and apply those skills as they write, revise, and proofread their work. Students grow their vocabulary by learning the meanings of words from the reading selections. They also grow their ability to determine word meanings through strategy-based instruction on concepts such as word relationships, context clues, and word parts. Foundational concepts of phonological awareness and phonics are included, as well. Spelling instruction focuses on common spelling patterns and understanding how to apply these patterns to words beyond those on the spelling lists.</p>
	<p>Third Grade ELA</p>	<p>English Language Arts 3 continues to connect reading, writing, grammar, vocabulary, and spelling into one integrated program and adds dedicated time for keyboarding practice. Each thematic unit contains workshops that have one major focus (reading, writing, or word study) for instruction and reinforcement of big ideas. In reading workshops, students read independently both classic and contemporary works in a different genres and formats—fiction, poetry, drama, nonfiction, and magazines—before exploring each text through various activities. In writing workshops, students study writing models and then use the writing process to write a variety of compositions. They learn about grammar, usage, and mechanics and apply those skills as they revise and proofread their work. In word study workshops, students grow their vocabulary by learning the meanings of groups of conceptually related words. Students also learn to focus on spelling patterns that are necessary to be fluent, proficient readers, writers, and spellers.</p>

Grade Band 4-5	Fourth/Fifth Grade ELA	<p style="text-align: center;">Attachment 28 - ACAD</p> <p>ELA 4 and ELA 5 continue to provide a well-balanced approach to literacy that connects reading, writing, grammar, vocabulary, and spelling into one integrated program with dedicated time for keyboarding practice. The course comprises 15 units, including 2 assessment units. Each unit contains workshops that have one major focus (reading, writing, or word study) for instruction and reinforcement of big ideas. In reading workshops, students read independently both classic and contemporary works in different genres and formats—including fiction, poetry, nonfiction, and folktales—before exploring each text through various activities. In writing workshops, students study writing models and then use the writing process to write a variety of compositions. They learn about grammar, usage, and mechanics and apply those skills as they revise and proofread their work. In word study workshops, students grow their vocabulary by learning the meanings of groups of conceptually related words. Students also learn to focus on spelling patterns that are necessary to be fluent, proficient readers, writers, and spellers.</p>
Grade Band 6-8	Sixth Grade ELA	<p>This course equips students with the essential language arts skills needed throughout their academic careers. Students read and analyze a variety of informational and fictional texts. Instruction and reading strategies accompany reading selections to help engage students in the text and sharpen their comprehension. Students express their ideas and knowledge using standard (formal) English in written and oral assignments. Writing expressive, analytical, and procedural compositions helps students develop communication skills necessary in today’s world. Vocabulary is taught explicitly and through an array of vocabulary acquisition strategies that give students the tools to independently increase their vocabulary. Students study grammar, usage, and mechanics; and practice sentence analysis, sentence structure, and proper punctuation. The course includes discussion activities that engage students in the curriculum while creating a sense of community.</p>
	Seventh Grade ELA	<p>This course continues the development of comprehension and analysis of informational and fictional texts with an ongoing emphasis on reading strategies. Students express themselves using standard (formal) English in written and oral presentations. Students analyze and practice the form and structure of various genres of writing to enhance their communication skills. Students study a variety of media to understand informational and persuasive techniques, explicit and implied messages, and how visual and auditory cues affect messages. Grammar, usage, and mechanics skills are deepened. Students continue to widen their vocabulary and apply acquisition strategies and engage in discussion activities with their peers and instructor.</p>

	<p align="center">Eighth Grade ELA</p>	<p>Throughout this course, students engage in literary analysis and close reading of short stories, poetry, drama, novels, and informational texts. The course focuses on interpretation of literary works, analysis of informational texts, and the development of oral and written communication skills in standard (formal) English. Students read "between the lines" to interpret literature and go beyond the text to discover how the culture in which a work of literature was created contributes to the theme and ideas it conveys. Analysis of the structure and elements of informational texts and media helps students develop the skills needed for academic success and navigating the world. Students continue to acquire knowledge and skills in grammar, usage, mechanics, and vocabulary. Implementing reading strategies, self-monitoring progress and reflecting on successes and challenges help students become metacognitive learners.</p>
<p align="center">Grade Band 9-12</p>	<p align="center">Ninth/Tenth Grade English</p>	<p>K12's English 9 and 10 courses include engaging and interactive instruction about reading, writing, speaking and listening, and language, with a focus on exploring a wide variety of genres and their elements. Students learn how to carefully read, interpret, and analyze literature and nonfiction works of cultural or historical significance appropriate to their grade level. Throughout the course, students practice narrative, informative, and argument writing. Students also develop and deliver presentations, and participate in discussions with their peers.</p>
	<p align="center">American Literature</p>	<p>In this course, students read and analyze works of American literature from colonial to contemporary times, including poetry, short stories, novels, drama, and nonfiction. The literary works provide opportunities for critical writing, creative projects, and online discussions. Students develop vocabulary skills and refresh their knowledge of grammar, usage, and mechanics in preparation for standardized tests.</p>
	<p align="center">British & World Literature</p>	<p>Students read selections from British and world literature in a loosely organized chronological framework. They analyze the themes, styles, and structures of these texts and make thematic connections among diverse authors, periods, and settings. Students complete guided and independent writing assignments that refine their analytical skills. They have opportunities for creative expression in projects of their choice. Students also practice test-taking skills for standardized assessments in critical reading and writing.</p>
